AI Haeba

For owners using it for the first time

AI Haeba user guide

From sign-up to downloading your results — follow along, one screen at a time.

Before you start

AI Haeba makes things like promo posts, logos, slide decks and websites for you with AI. You pick what to make, write a few lines about your business, and press a button.

Three things you need

What	Why	Where
A Google or Kakao account	You sign in with it — no new password to make.	One you already use
A Gemini API key	Tools run on your own key. Any charges go to your own Google account.	Google AI Studio (see the separate API key guide)
A PC and Chrome	Phones work too, but a bigger screen is easier at first.	aihaeba.com

> **Good to know**
>
> This guide follows an example café called 'Moonlight Garden' in Haeundae, Busan. The shop name and details on screen are examples — use your own as you follow along.

9 Six popular tools, step by step 14

10 When you get stuck 27

The red numbers 1 2 on the screenshots match the steps. Follow them in order.

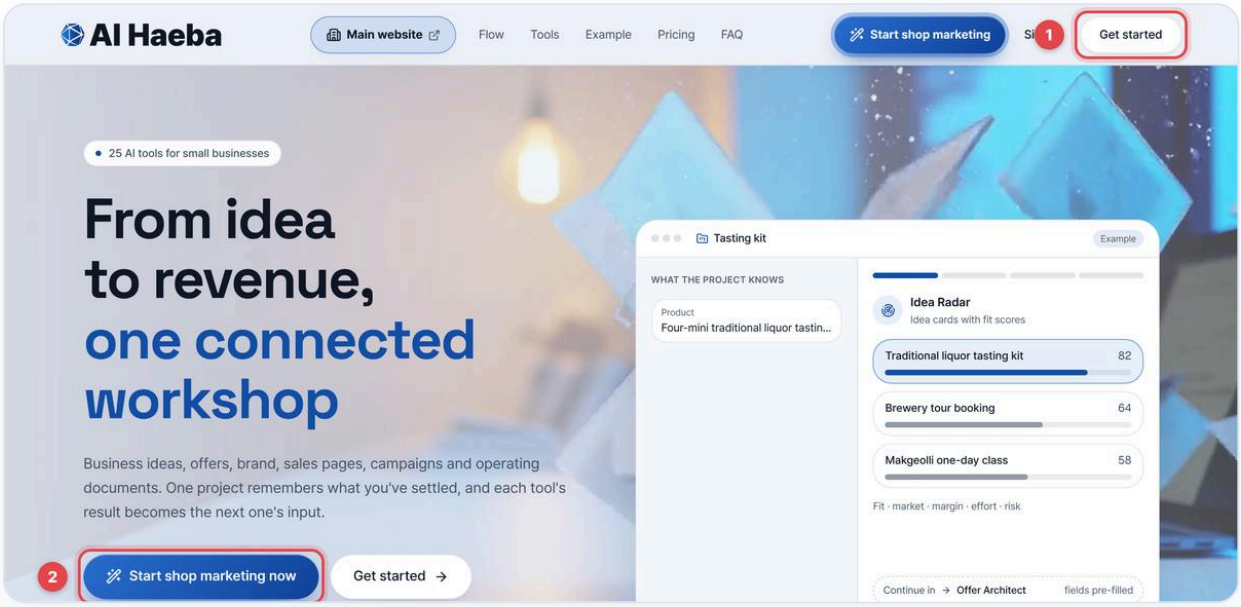

1

Sign up

Takes about a minute. No card needed.

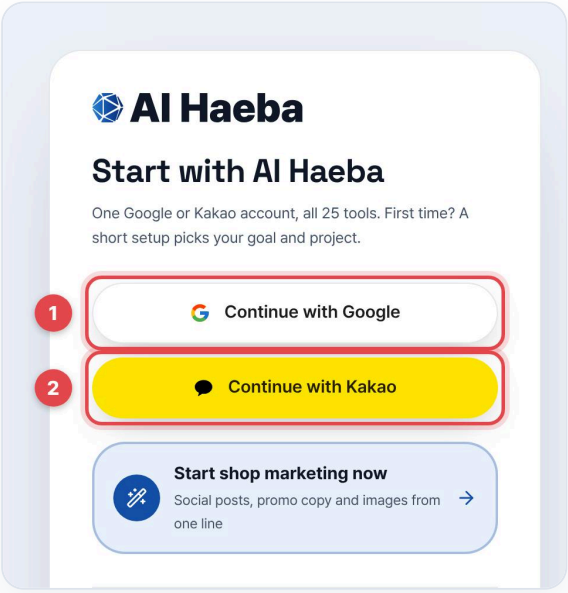

1 Go to aihaeba.com

Press 1 **Get started** at the top right. If you want a promo post straight away, 2 **Start shop marketing now** works too.

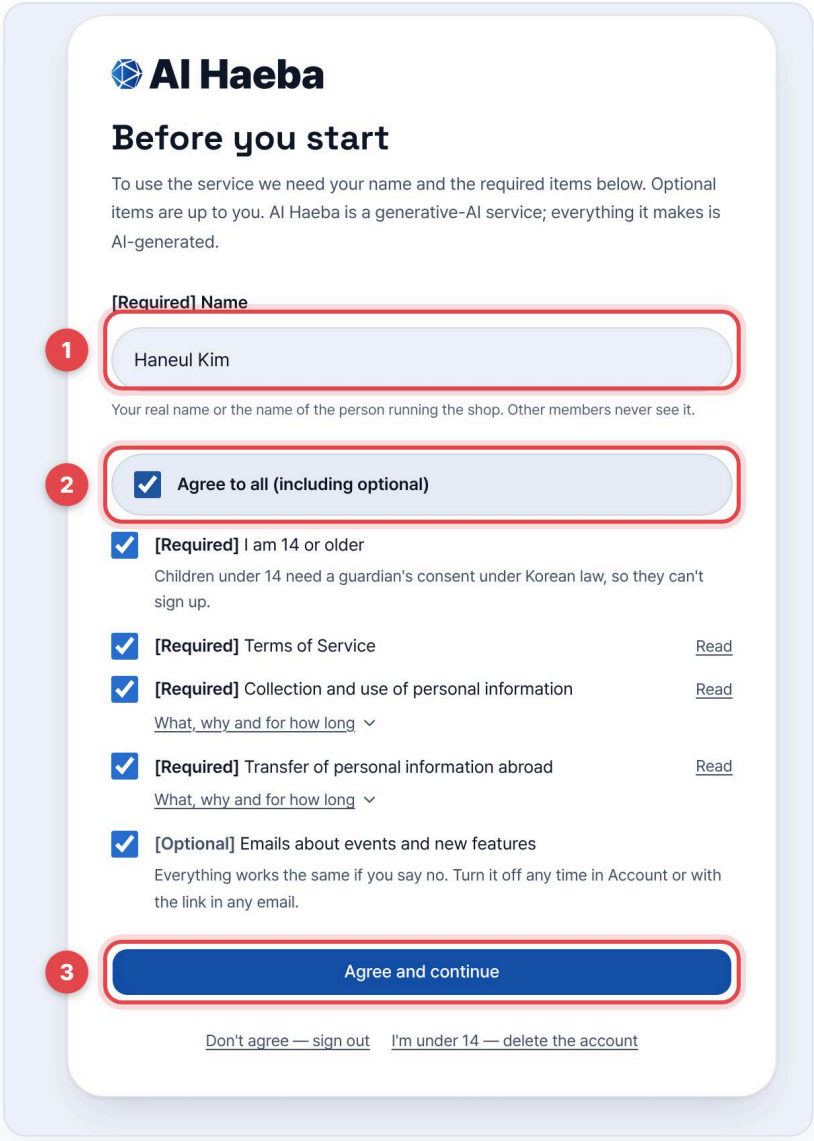

2 Sign in with Google or Kakao

Press the button for an account you already use — 1 Google or 2 Kakao. The first time, that company shows its own sign-in screen once.

3 Enter your name and agree

1 Your name is required — your real name or the shop contact's. 2 **Agree to all** ticks everything at once. The email newsletter on the last line is optional; untick it if you'd rather not. 3 Press **Agree and continue** and you're in.

Good to know

Other members never see your name. You can change it later under Account.

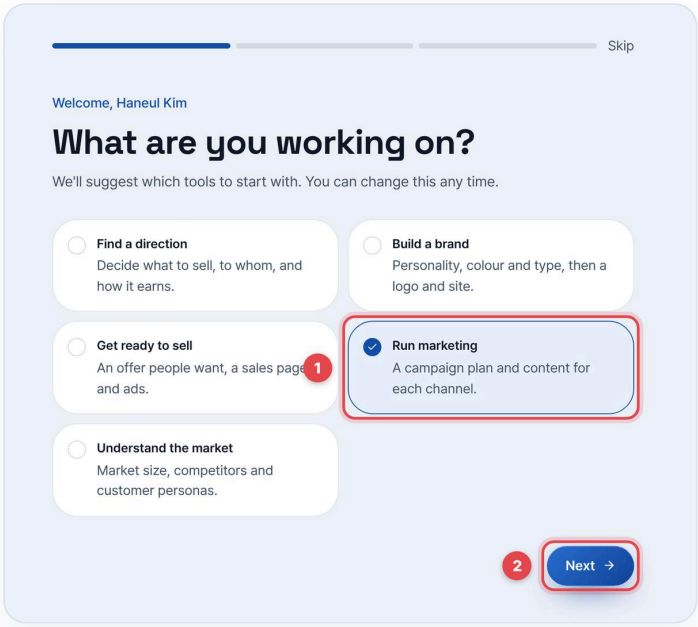

2

The first-time guide

Your first sign-in shows a 3-step guide. You can skip it, but it picks the right tools for you.

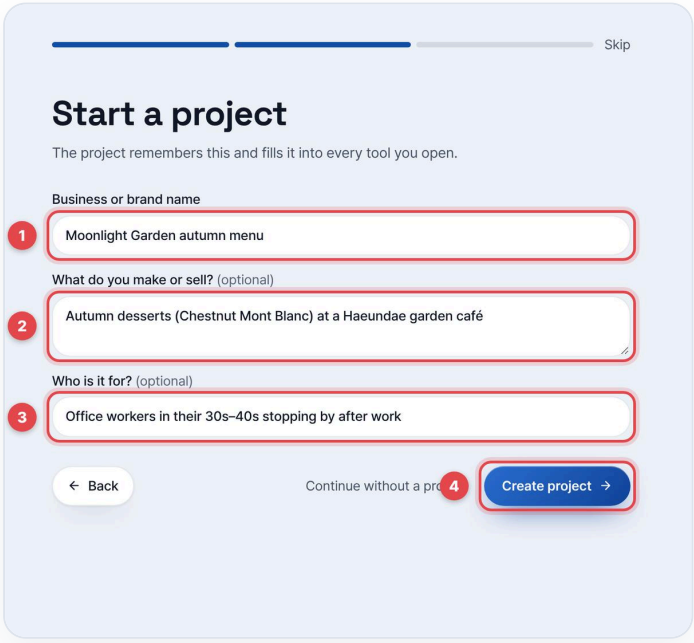

1 Pick what you want to do

1 Choose the most urgent job, then 2 **Next**. Our example café needs to promote a new dessert, so it chose **marketing**.

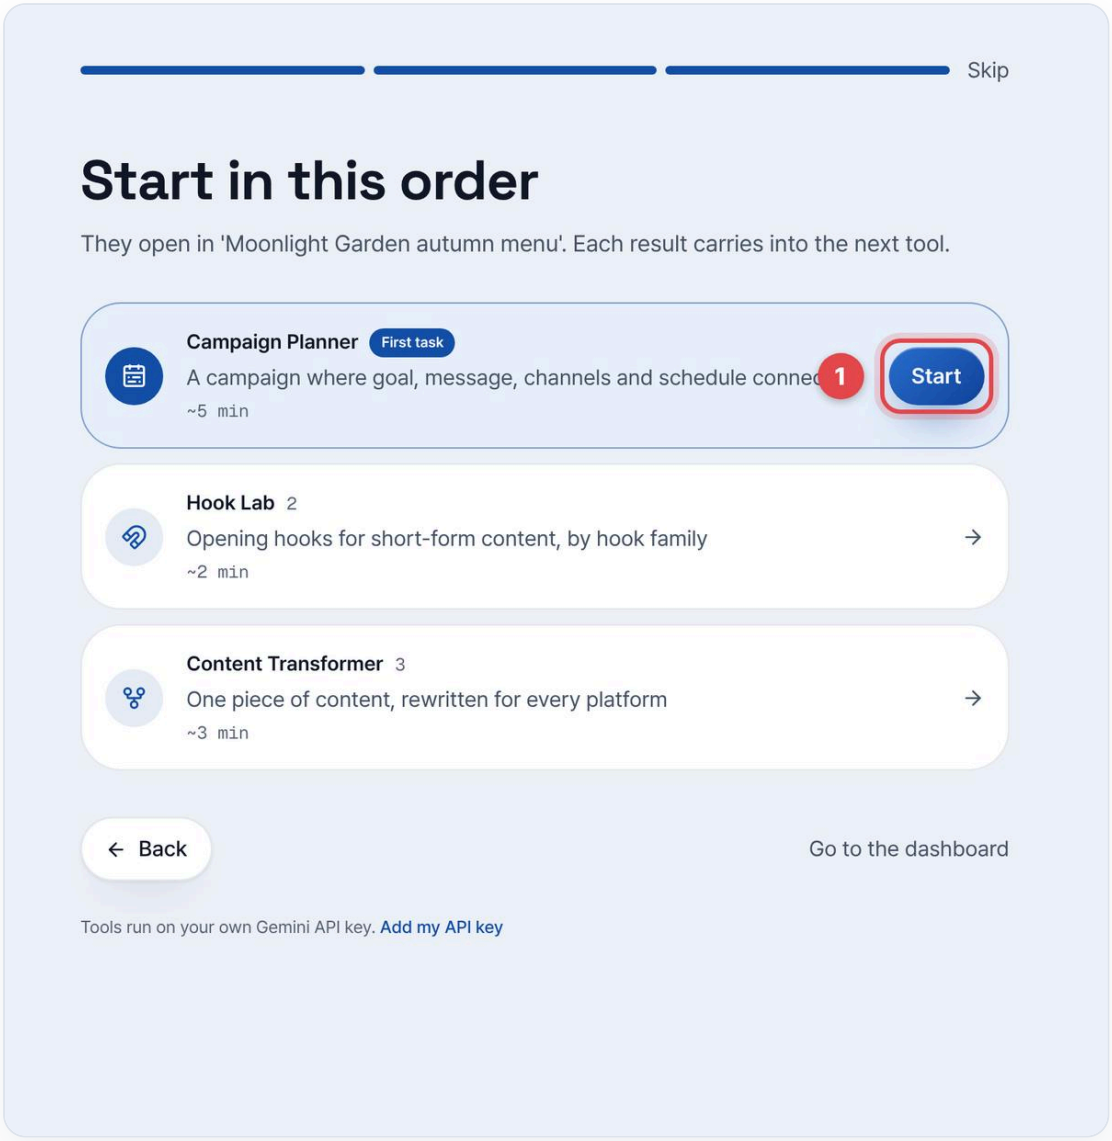

2 Start a project

A project is a folder for one piece of work. 1 A name is enough; add 2 what you sell and 3 who it's for and every tool opens with them filled in. Press 4 **Create project**.

3 Start in the suggested order

Three tools for your goal appear in order. 1 **Start** opens the first one. Each tool's result carries into the next, so going top to bottom is easiest.

Tip

Skipped it? No problem — start any time from Tools or Quick start in the right-hand menu.

3

Connect your API key

Tools need a Gemini API key, once. How to get one is in the separate ‘API key setup guide’. Here we only show where to paste it.

1

Go to Account → My API key

You can also press **Key** near the bottom of the right-hand menu. Paste 1 your key into the first Google Gemini slot and press 2 **Apply**.

2

Done when it says ‘Applied’

A green check with **Applied** and the key's last four characters means it's connected. Keys are stored encrypted and never shown in full again.

Careful

Tools that draw pictures (logos, images) need a **key with billing turned on**. A free key only makes text. Add more keys in slots 2 and 3 and Haeba switches to the next one when a limit is hit.

4

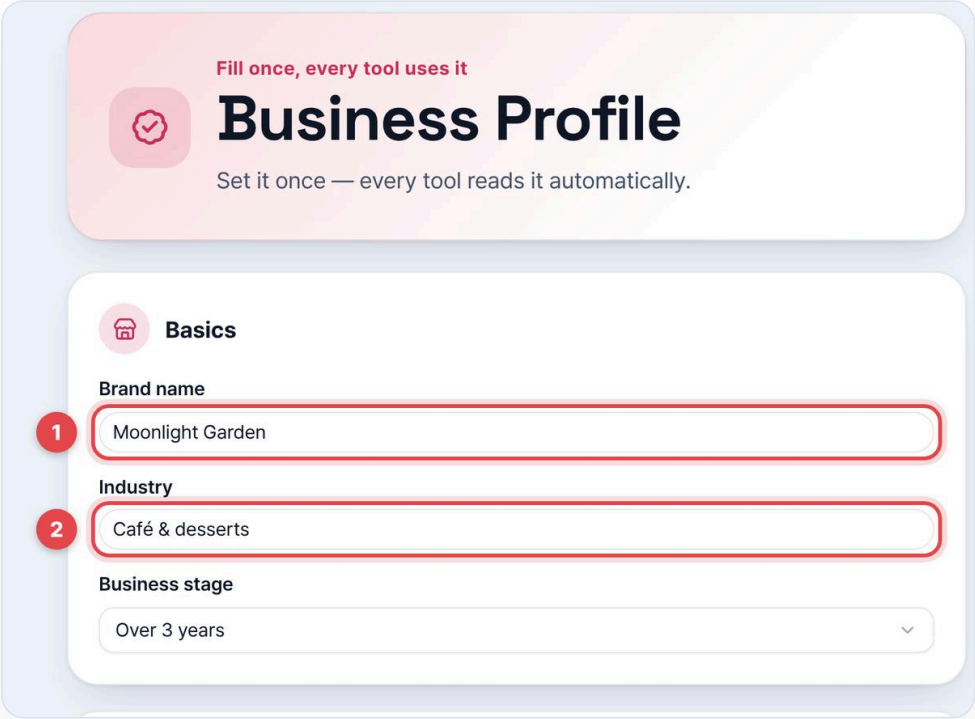

Fill in your business profile

Write it once and every tool reads it. Five minutes here makes every result sound much more like your shop.

1

Press Brand in the right-hand menu

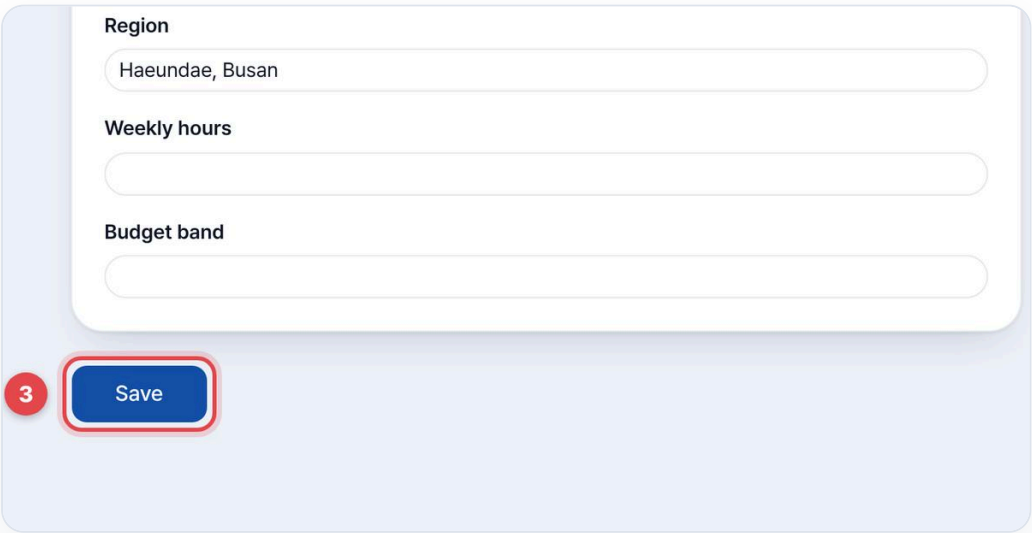

Start with 1 brand name and 2 industry. Below that, fill in stage, target customer, tone, brand colours and region — as much as you know.

2

Press Save at the bottom

Changes only count after 3 **Save**. Tools now open with chips like 'Brand name: Moonlight Garden' at the top. Press × on a chip to leave it out of one run.

5

Finding your way around

The same menu floats on the right of every screen. If you get lost, just remember this menu.

1	**Quick start**	One line in, a social post, promo copy or images out. Start here if you're new.
2	**Studio**	Your home: recent work and what to do next.
3	**Tools**	All 25 tools, searchable by the job you want done.
4	**Projects**	Work folders. Tools in one project remember and share details.
5	**Library**	Everything you've made. Reopen and download any time.
6	**Brand**	Your business profile (chapter 4).
7	**Help**	FAQ, customer service and what's new.
8	**Account**	Your name, API keys, closing your account.

Tip

Type a job like ‘logo’ or ‘pitch’ into **Find a tool** at the top to jump straight to it.

Good to know

At the bottom of the menu, the moon switches to dark mode and **KO/EN** switches language.

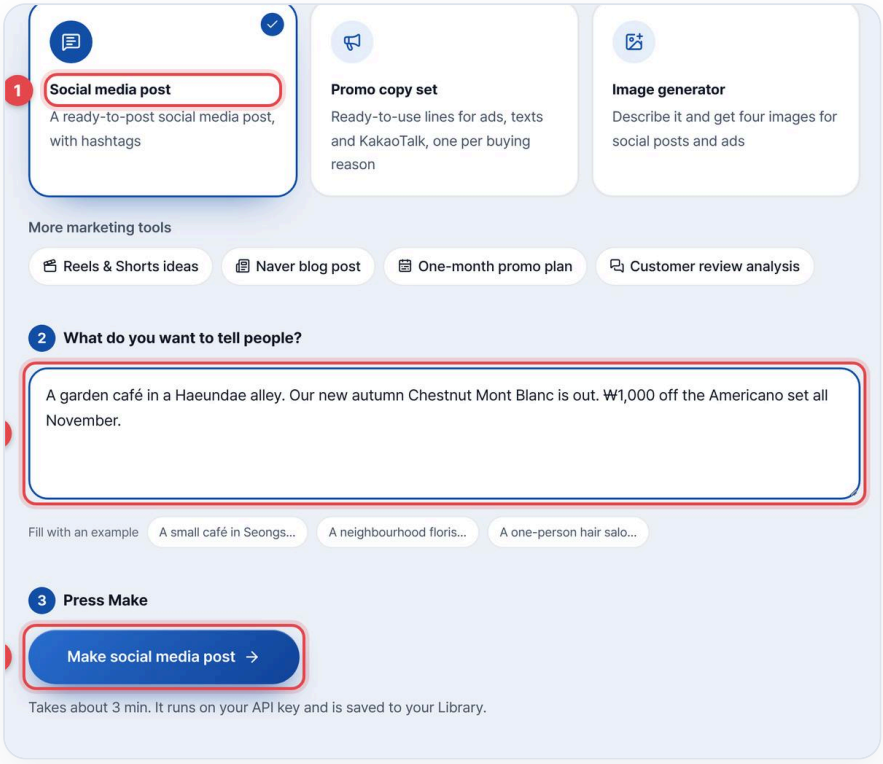

6

Your first result with Quick start

The easiest way in: pick, write, press.

1 Just three steps

1 Pick what to make (e.g. **Social media post**). 2 Write what you want to announce, the way you'd say it — what, until when, how much. **Fill with an example** shows how. 3 Press **Make**.

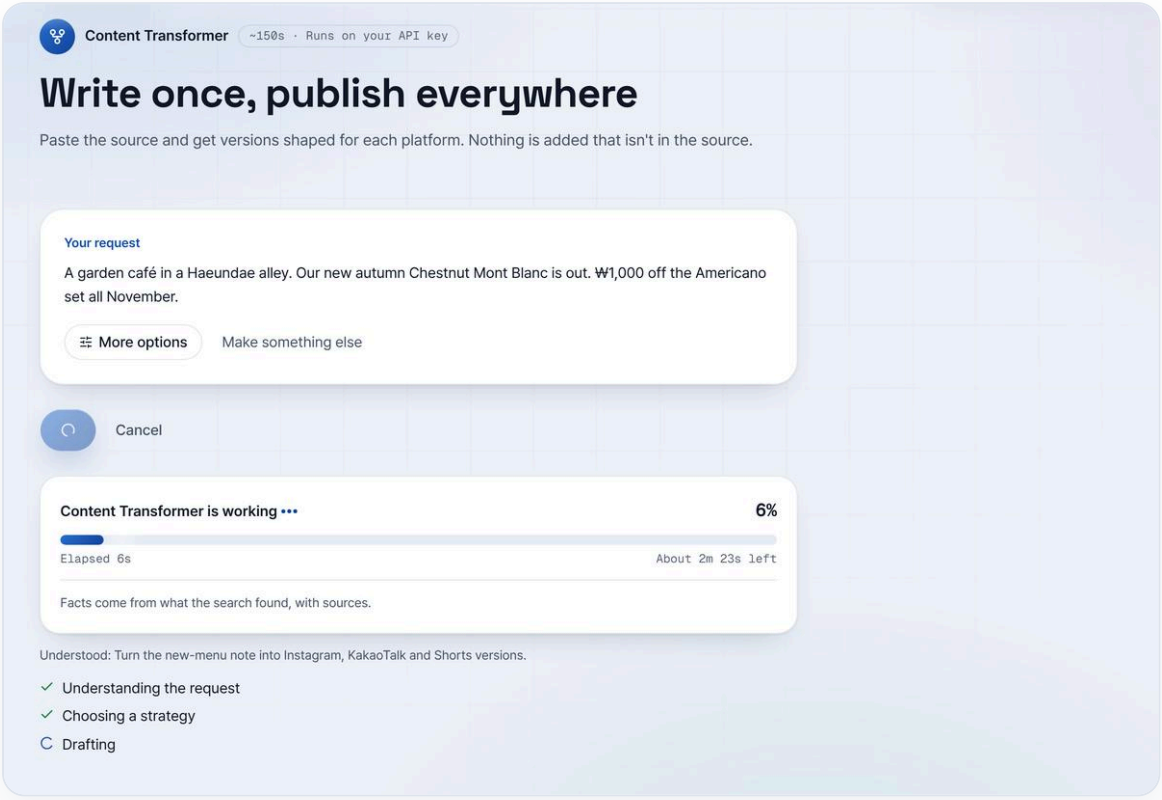

Tip

The more specific, the better. 'New menu out' is weak; 'New Chestnut Mont Blanc, ₩1,000 off the Americano set all November' is strong.

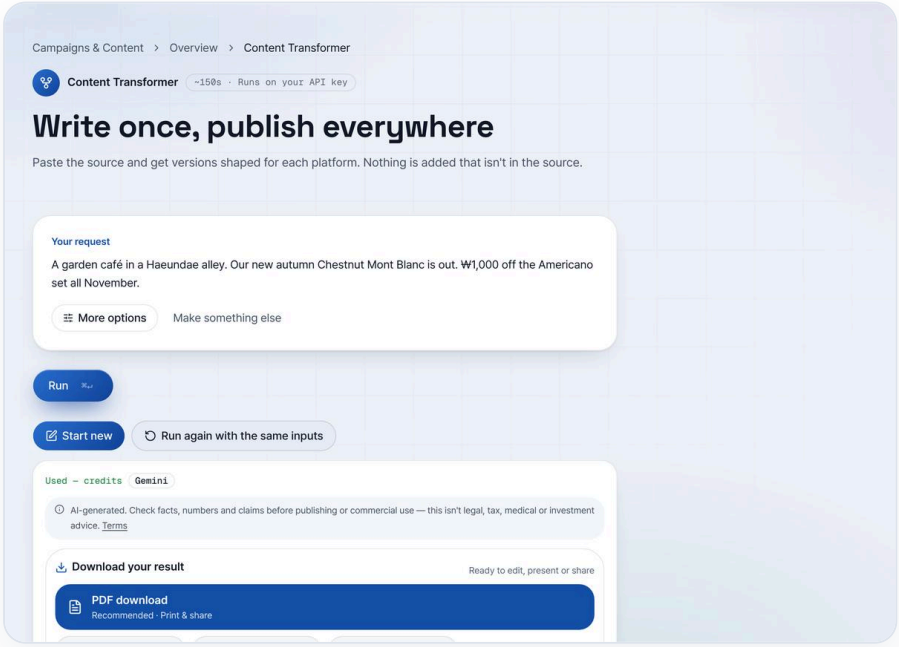

2 Wait while it's made

A progress bar and time left appear below. It usually takes 2–5 minutes. You'll see it understand the request → choose a direction → draft, ticked off in turn. You can close the window — the work carries on and lands in your Library.

3 Your result is ready

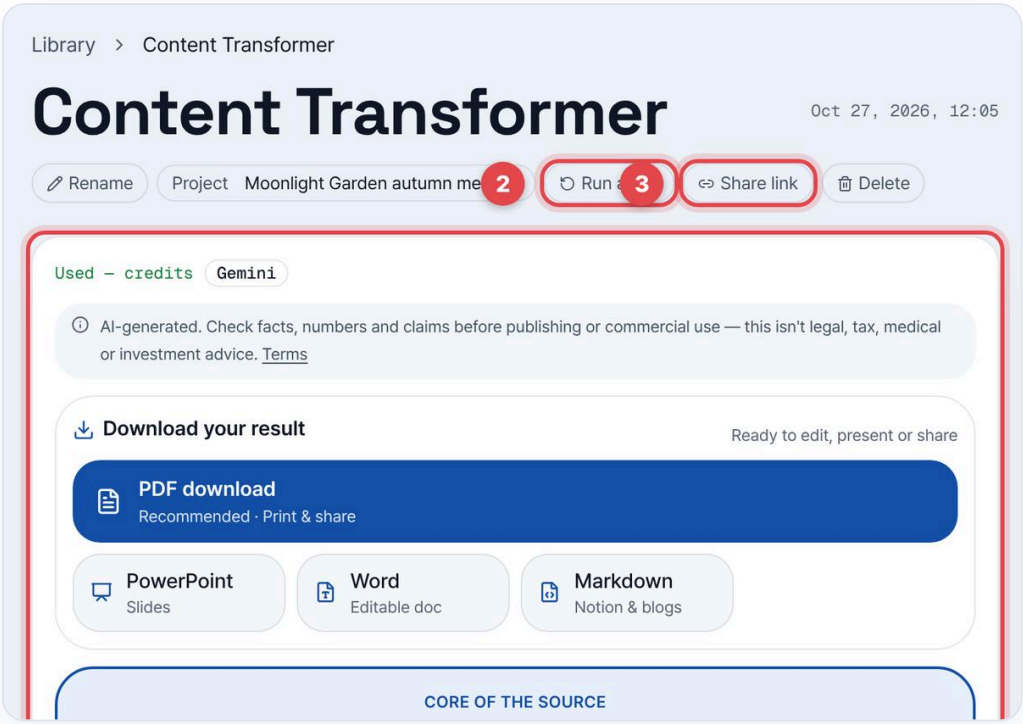

The result appears further down the same page. Download it right away from **Download your result**. Not quite right? Press **Run again with the same inputs**.

7

View and download results

A results page has only a few buttons. These are all you need.

1	**Download your result**	Download in the format you need — see the table below.
2	**Run again**	Reopens the tool with your inputs filled in — handy for small changes.
3	**Share link**	Makes a link anyone can view without signing in. You can turn it off any time.

Which format?

PDF	Best for printing or sending on KakaoTalk. Usually the one to pick.
PowerPoint	For presenting or editing the slides yourself.
Word	When you want to edit the wording yourself.
Markdown	For pasting into Notion or a blog.

> **Careful**
>
> Results are AI drafts. Check facts like prices, dates and phone numbers before you post.

8

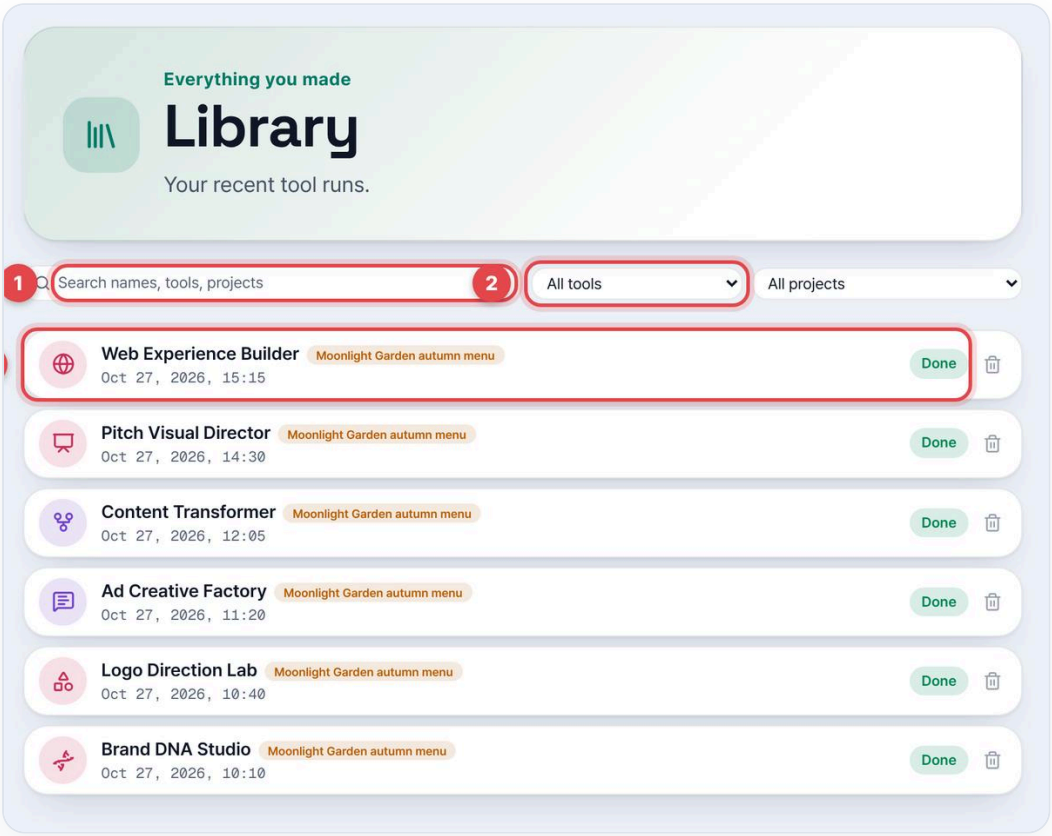

Find it again in the Library

Everything you make is saved to the Library automatically. No save button needed.

1

Search, filter, open

1 Search by name or tool, 2 filter by tool or project. 3 Click an item to open its result and download it again.

Careful

The bin icon deletes a result. Deleted results can't be recovered, so download anything you need first.

9

Six popular tools, step by step

The six tools our members use most. Every tool works the same way.

1. **Open the tool** — Pick it from Tools
2. **Fill in the form** — Only * is required
3. **Press Run** — Blue button at the bottom
4. **Get the result** — PDF, PPT, Word

	Tool	Time	You get
1	**Brand DNA Studio** Defining your shop's personality, voice and colours	~3 min	A brand board (personality, sample lines, palette, fonts, taglines)
2	**Logo Direction Lab** You need logo ideas	~2 min	Four different logo concepts + PNG files
3	**Ad Creative Factory** Promo copy for a sale or event	~3–4 min	Ads per buying motive + Instagram/SMS versions
4	**Content Transformer** Posting one piece across many channels	~2–3 min	Carousel, caption, KakaoTalk message, Shorts script
5	**Pitch Visual Director** A proposal or presentation	~5 min	A slide deck with a storyline + speaker notes (PPT)
6	**Web Experience Builder** You need a website	~7 min	A ready-to-use one-page website (HTML)

Times are typical; they can be longer when it's busy.

Tip

Fill with an example: every tool has example cards beside the form. Click one to fill the form and see what good input looks like.

Tip

Ask for anything, in your own words: anything not in the options — must-haves, things to avoid — goes in this box under the form. It takes priority.

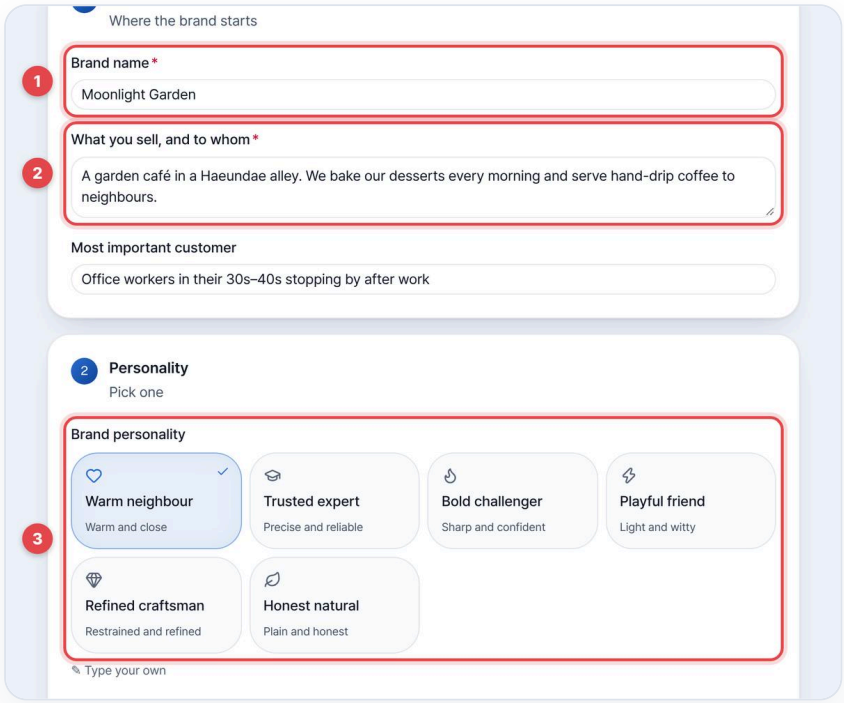

9-1

Brand DNA Studio

Sums up ‘what does our shop feel like?’ on one board. Other tools can reuse the personality, voice and colours, so it's a good first step.

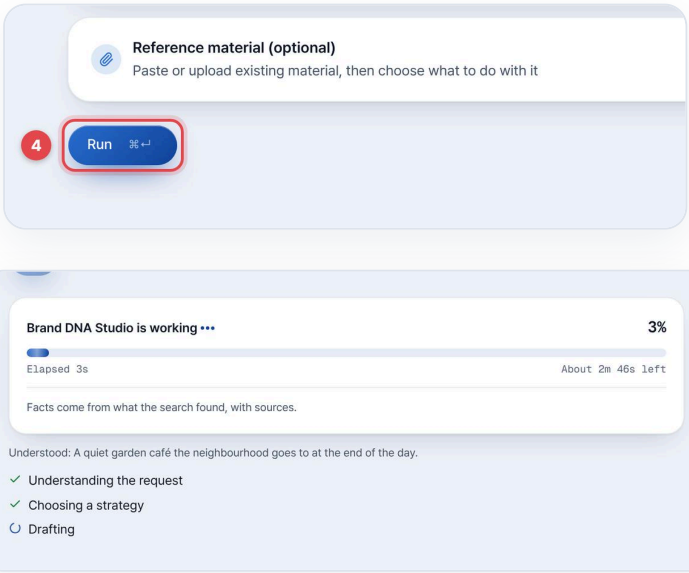

1 Fill in the form

Enter 1 the brand name and 2 what you sell, to whom (required), then 3 pick a personality. Further down: styles you like, values to keep and what to avoid.

2 Press Run at the bottom

Wait while the progress bar runs. You can close the window — it's saved to your Library.

3 Check the result

You get a one-line definition, personality scores, sample lines (Instagram, closures, new menu), a palette with fonts, and tagline options. Click a colour code to copy it.

Tip

Use **Continue in** below the result to open the Logo Direction Lab — the colours and personality carry straight into the logos.

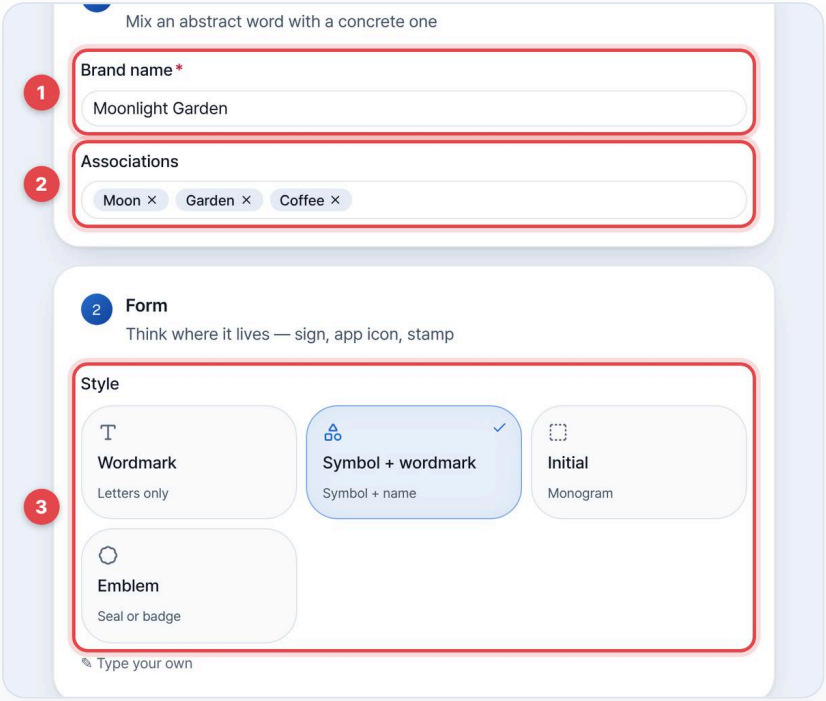

9-2

Logo Direction Lab

A brand name and three words give you four genuinely different logo concepts — great for setting a direction before you brief a designer.

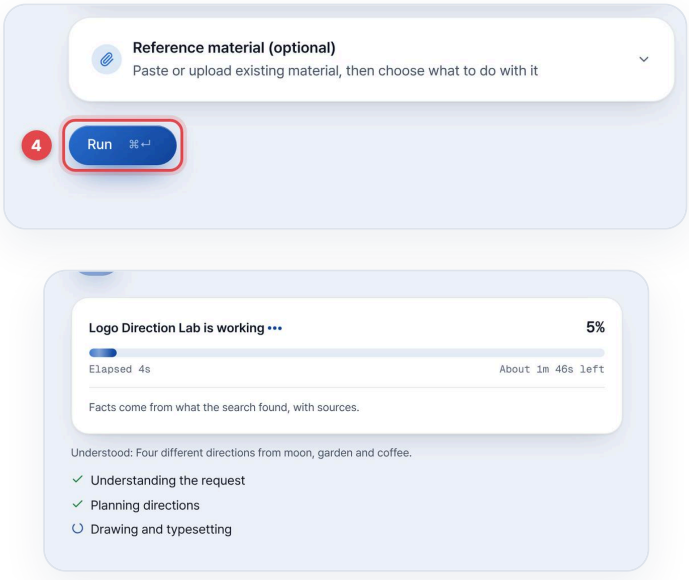

1 Fill in the form

Enter 1 the brand name (required), 2 up to three associations (type a word, press Enter), and 3 a style. Under Colour, **Use brand colors** takes the colours from your profile.

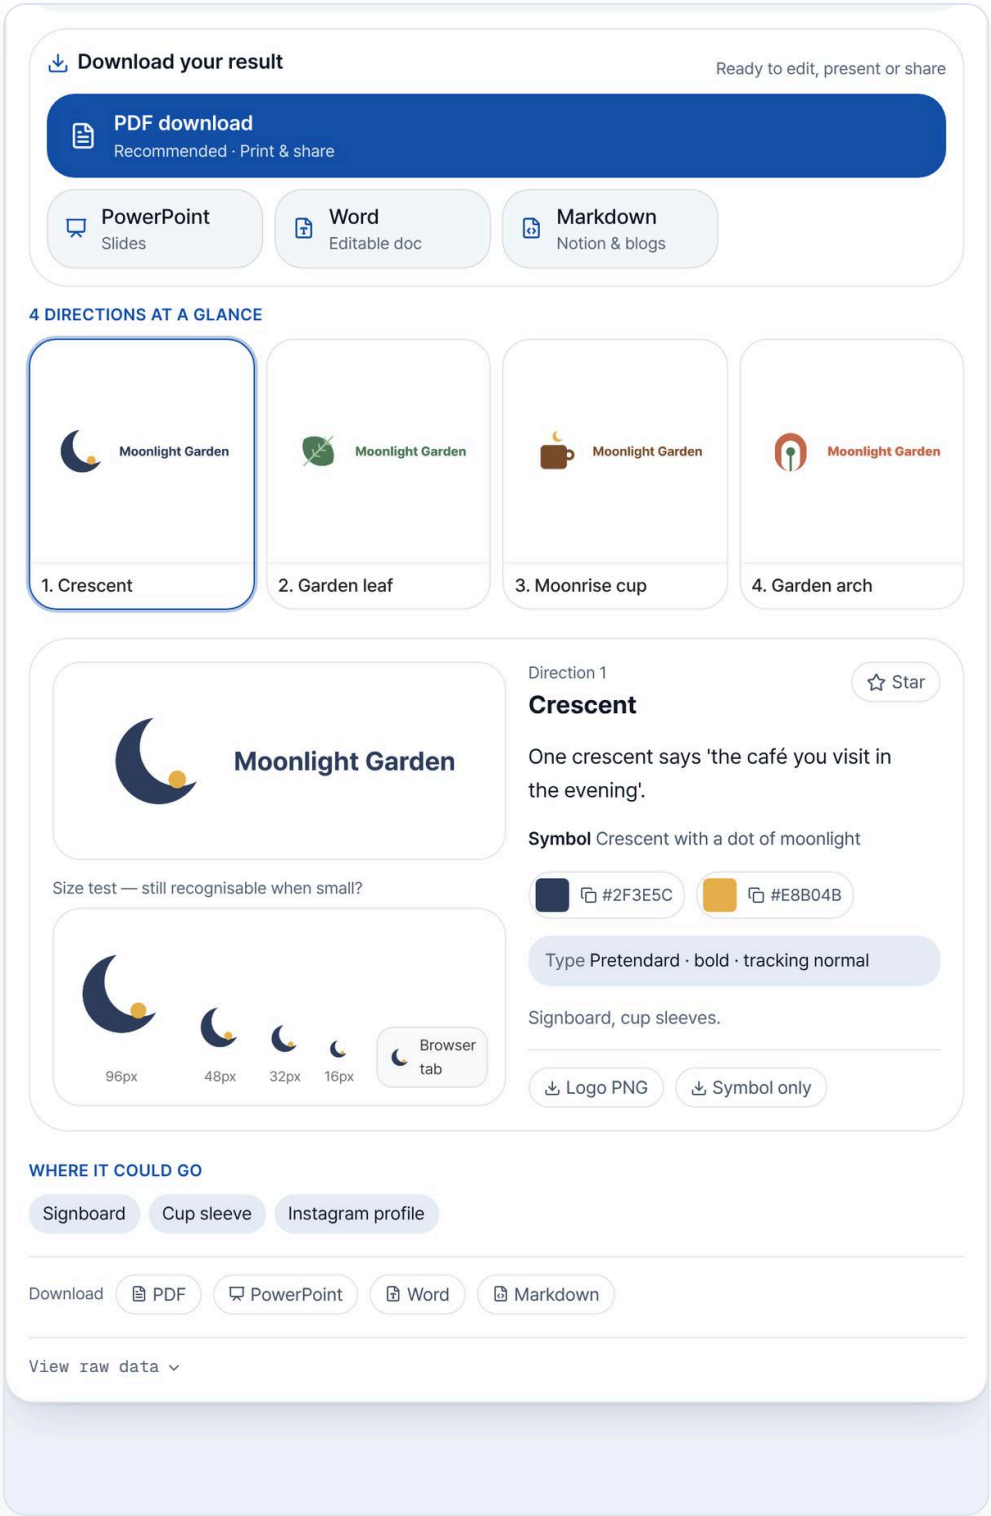

2 Press Run at the bottom

Wait while the progress bar runs. You can close the window — it's saved to your Library.

3 Check the result

Four concepts appear side by side; click one to see it large, with a size test showing whether it still reads when tiny. Download with **Logo PNG** or **Symbol only**.

Tip

Logos are drawn as images, so this tool needs a **key with billing on**. Check for similar trademarks before you register one.

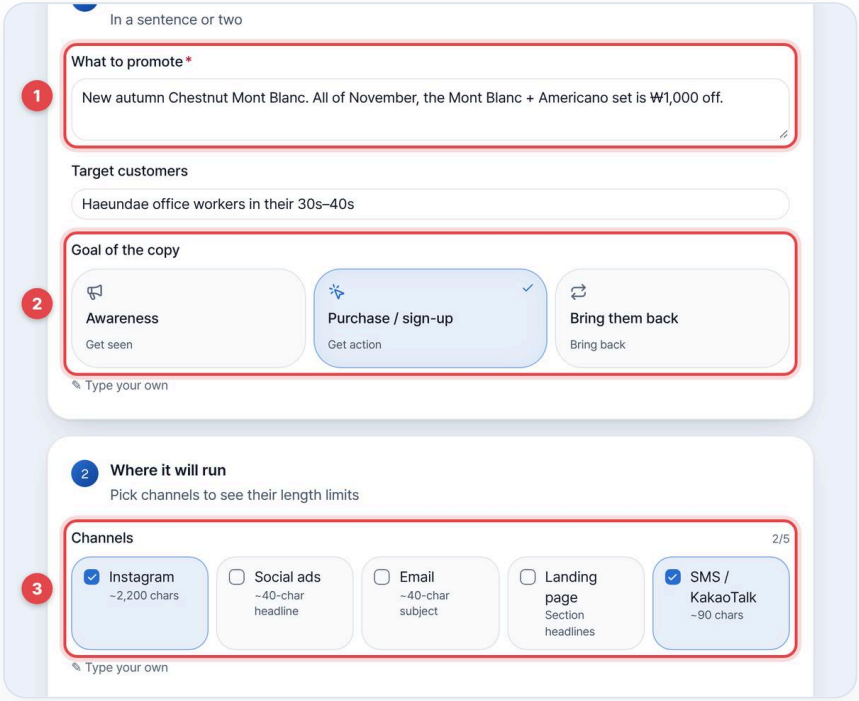

9-3

Ad Creative Factory

Turns one message into different ads for different buying motives, sized for each channel like Instagram or SMS/AlimTalk.

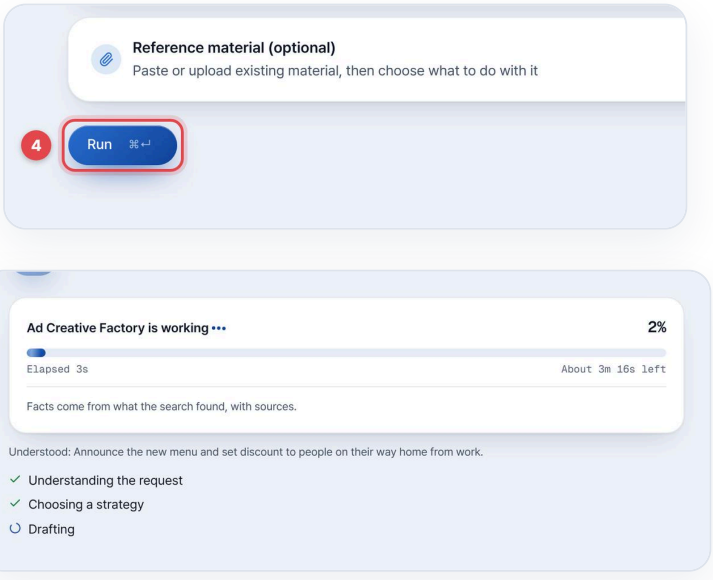

1 Fill in the form

In 1 What to promote (required) say what, until when and how much. Choose 2 the goal and tick 3 the channels. Put dates or the area in 'Facts to include' so they're never left out.

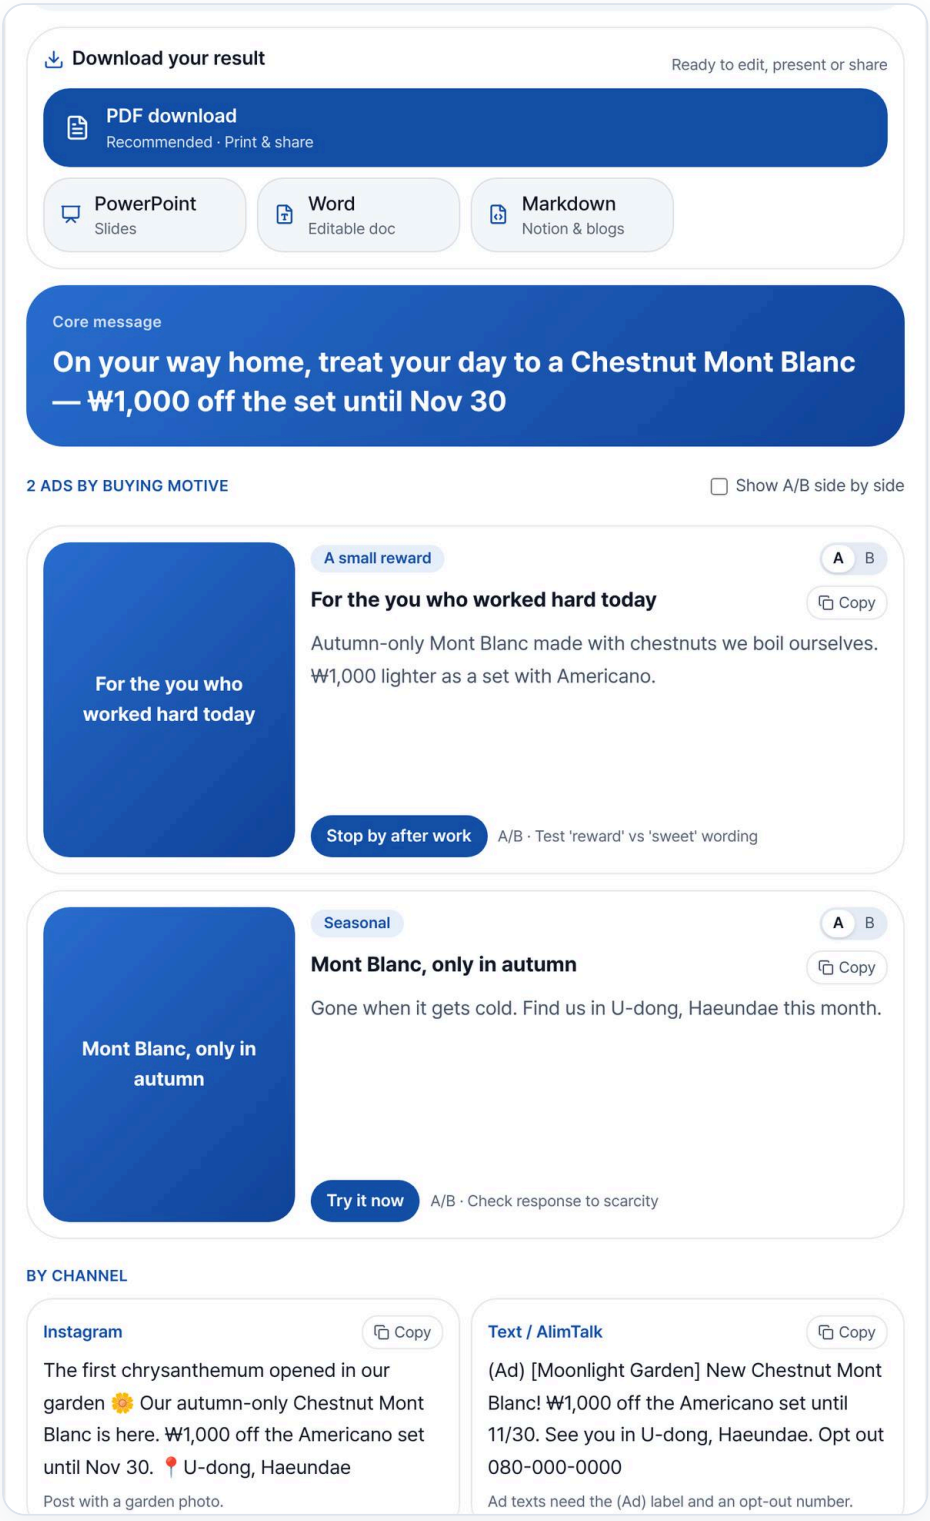

2 Press Run at the bottom

Wait while the progress bar runs. You can close the window — it's saved to your Library.

3 Check the result

You get one core message, ads per motive (A and B versions) and a version per channel. Press **Copy** beside any of them to paste it straight in.

> **Tip**
>
> Ad texts in Korea must start with (광고) and include an opt-out number. Make sure the result includes them.

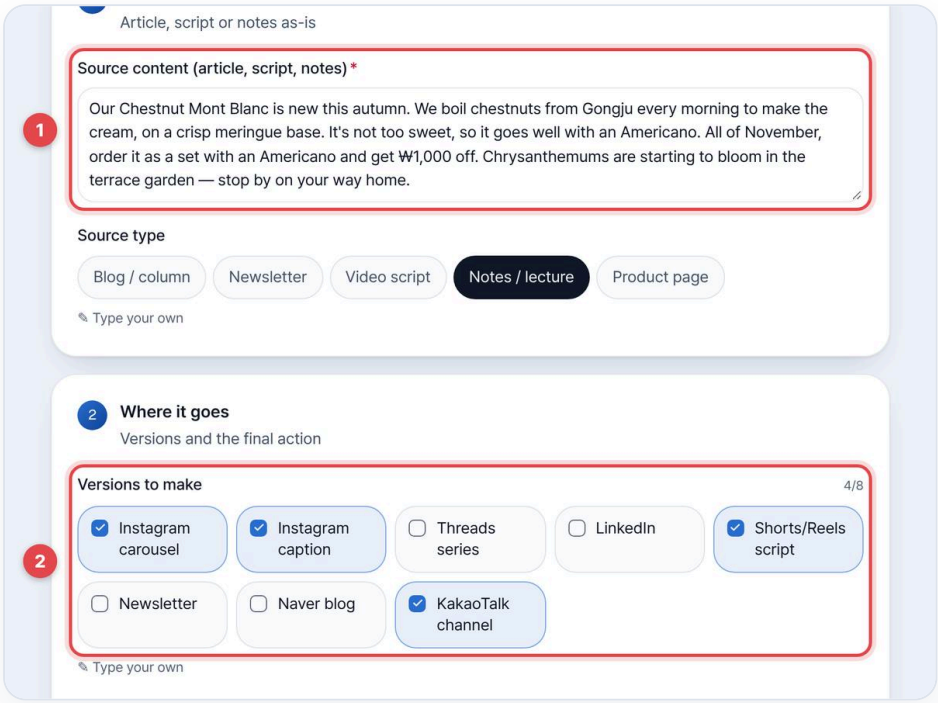

9-4

Content Transformer

Rewrites one blog post or note as an Instagram carousel, caption, KakaoTalk channel post and Shorts script. Quick start's ‘Social media post’ uses this tool.

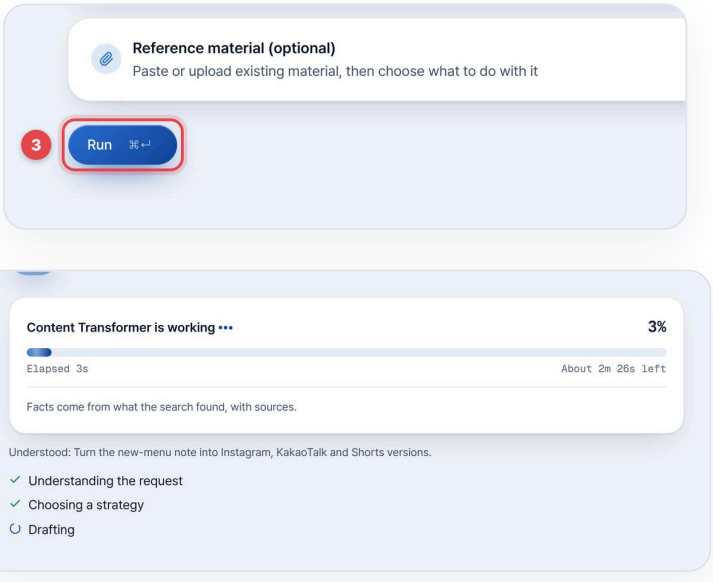

1 Fill in the form

Paste your text or notes into 1 Source content (required) — rough notes are fine. Tick 2 the versions to make (up to 8).

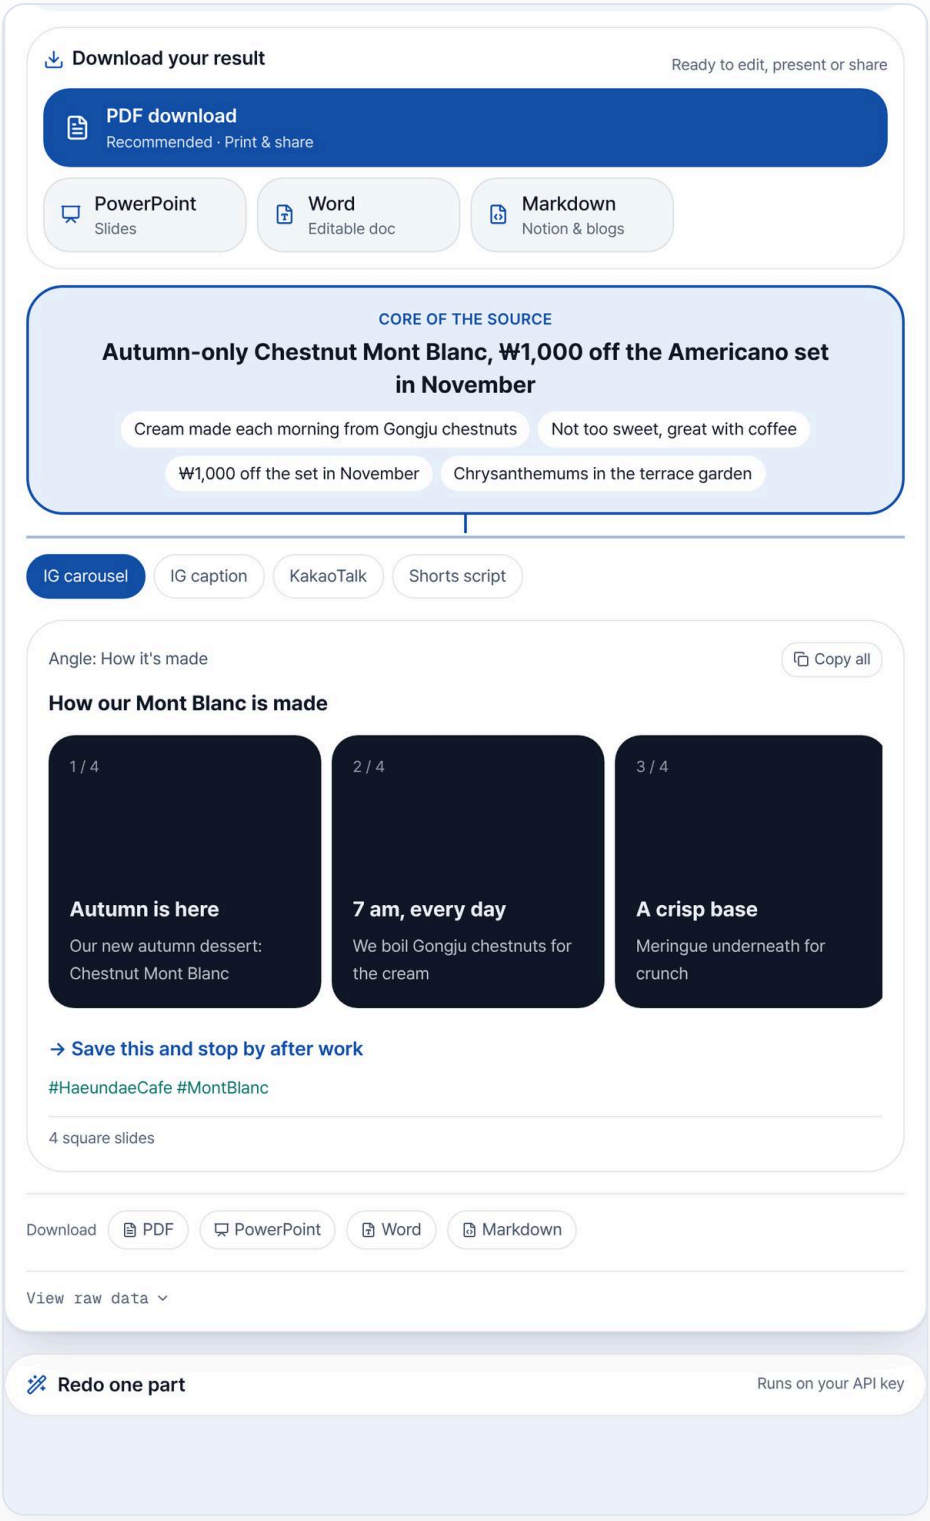

2 Press Run at the bottom

Wait while the progress bar runs. You can close the window — it's saved to your Library.

3 Check the result

You get the core message plus one card per platform. Carousels come slide by slide and Shorts scripts second by second, ready to follow.

Tip

It never adds facts that aren't in your source, so put prices and dates in the original.

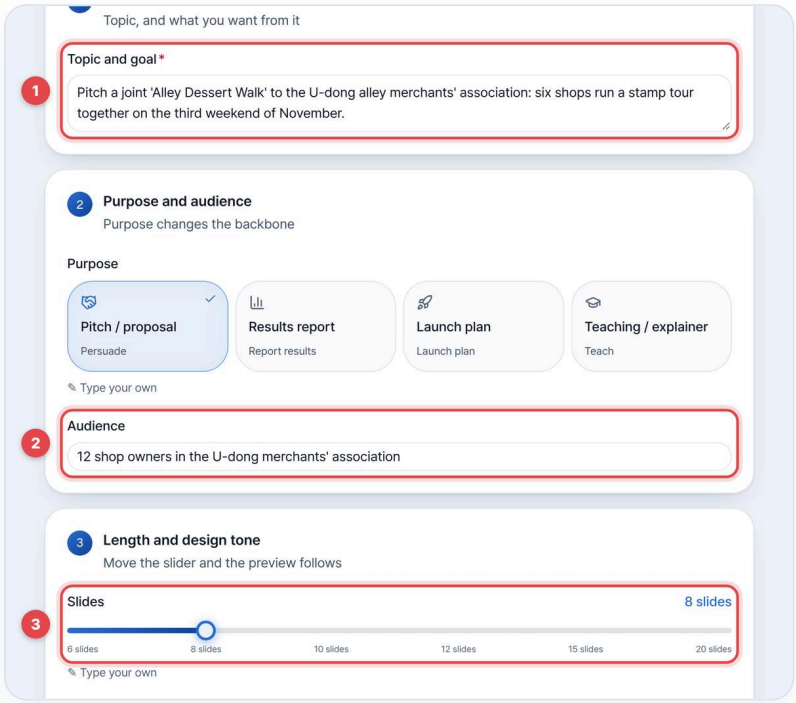

9-5

Pitch Visual Director

For talks that need to persuade — a proposal to fellow shop owners, a pitch for funding. It plans the storyline first and adds speaker notes to every slide.

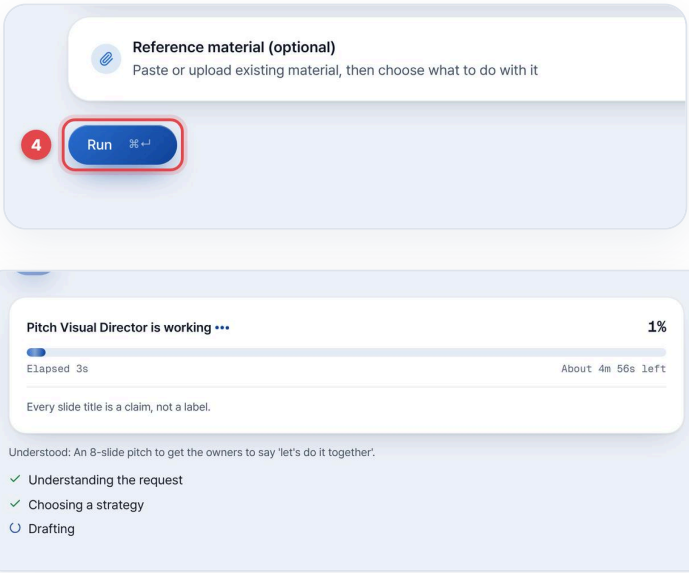

1 Fill in the form

Enter 1 the topic and goal (required), 2 the audience and 3 the number of slides. Numbers in 'Data and figures to include' become charts.

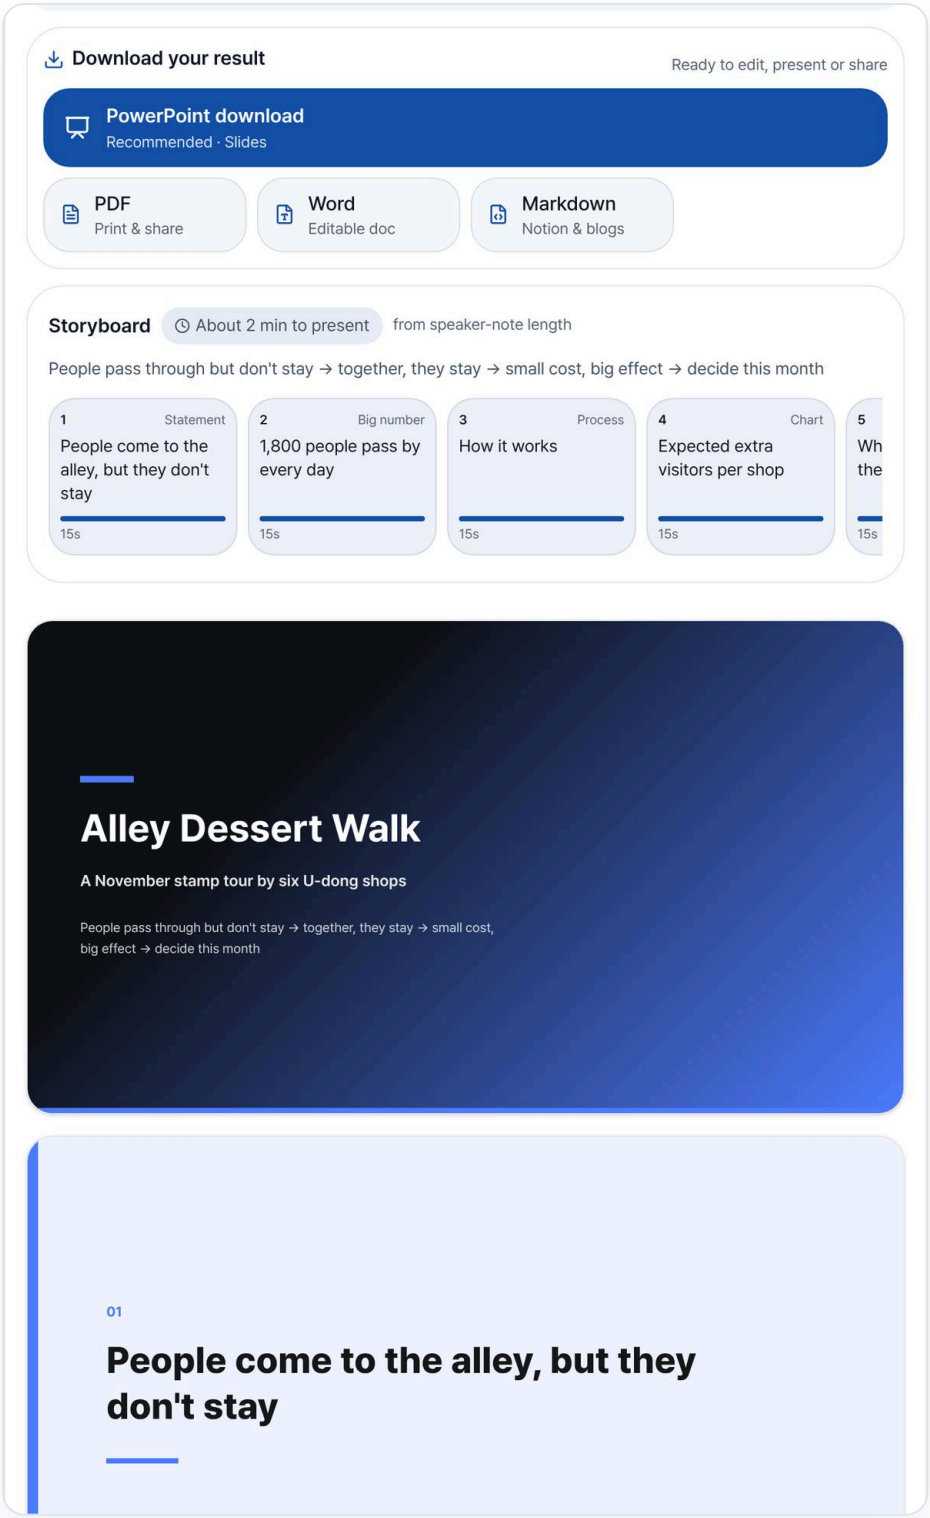

2 Press Run at the bottom

Wait while the progress bar runs. You can close the window — it's saved to your Library.

3 Check the result

You get the storyline and the slides in order, each with its own layout — big number, chart, table, comparison, quote. Download with **PowerPoint** to edit and present.

Tip

Estimated numbers are labelled as estimates. Double-check sources before you present.

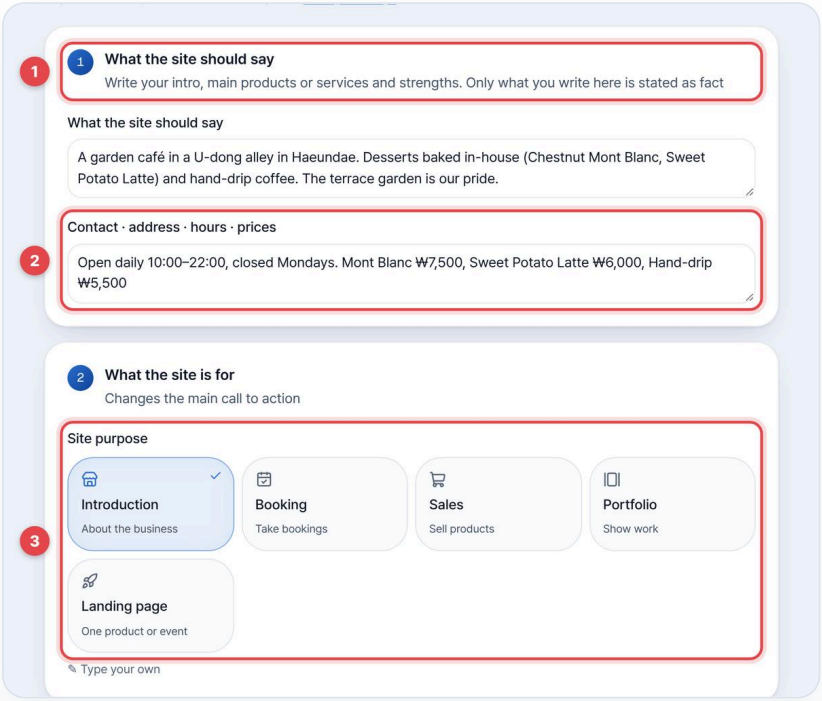

9-6

Web Experience Builder

Builds a one-page website for your shop with just what customers want to know: menu, story, how to find you.

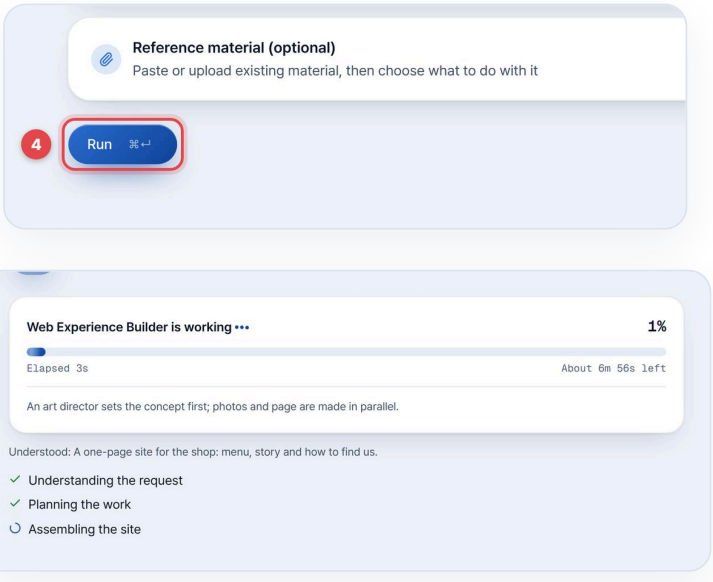

1 Fill in the form

Write 1 what the site should say and 2 contact details, address, hours and prices. Anything you leave out is marked [to fill in], never made up. Choose 3 the site's purpose.

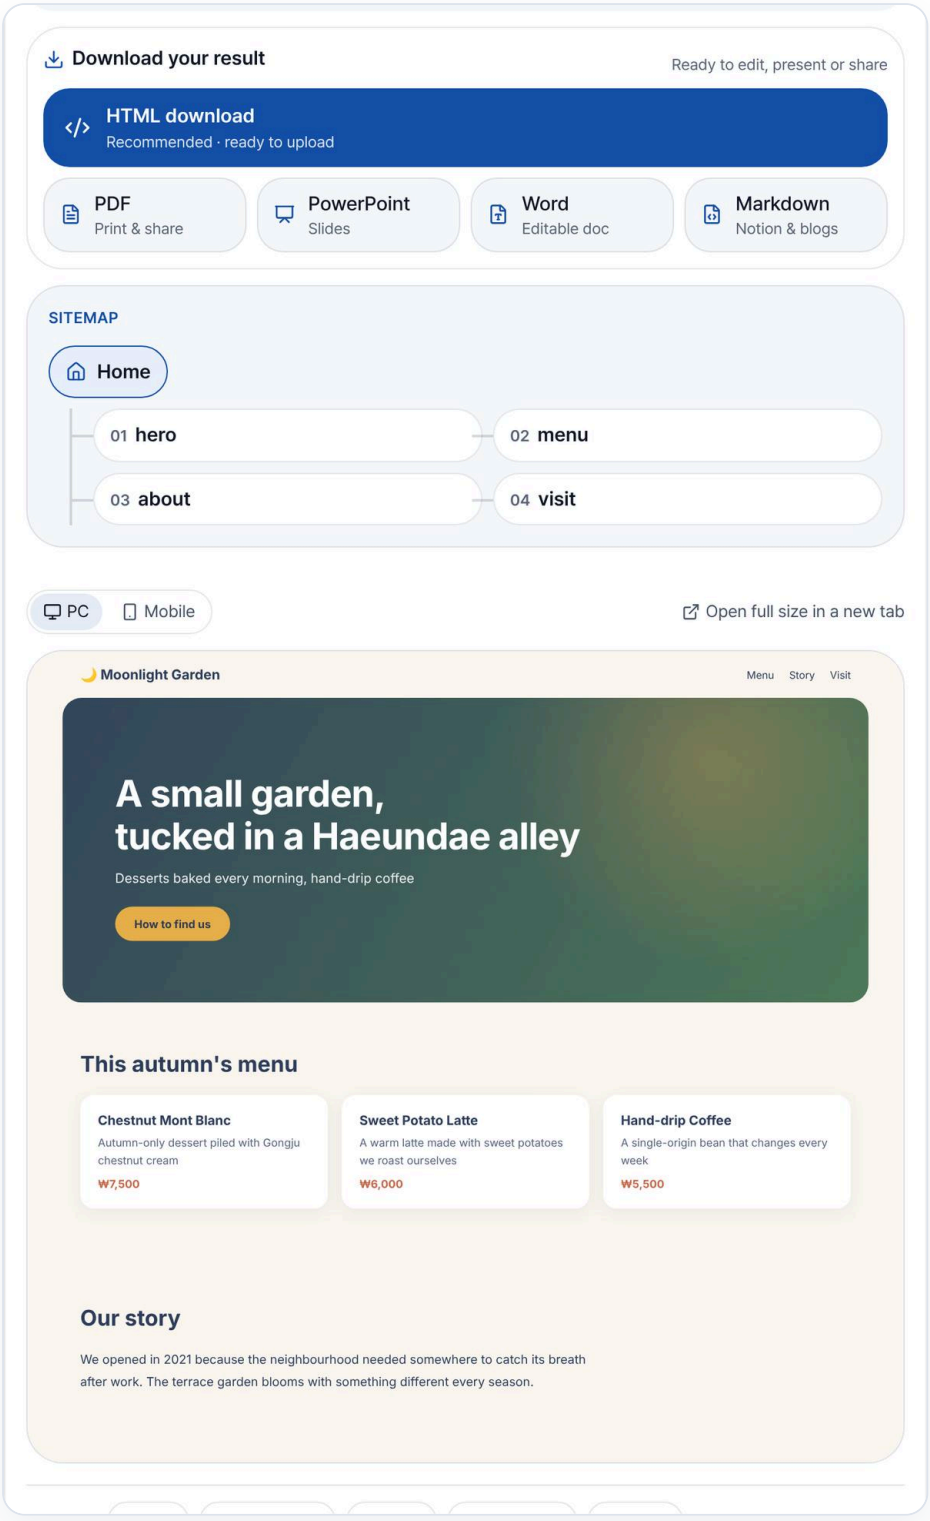

2 Press Run at the bottom

Wait while the progress bar runs. You can close the window — it's saved to your Library.

3 Check the result

Preview it on PC and mobile. The single file from **HTML download** is the website itself; **Open full size in a new tab** shows it full size.

Tip

Upload the HTML file to any web host and it's live. If that's unfamiliar, ask customer service.

10

When you get stuck

Common situations and what to do. Look for the message you see on screen.

If you see	Do this
'Your API key was refused'	The key was deleted or billing has a problem. Check the key and billing in Google AI Studio, then add a new key under Account → My API key.
'A free key can't make images'	Logo and image tools need billing turned on. Enable it in AI Studio and run again. Text tools work on a free key.
'Too many requests right now'	A short rush. Try again in 1–2 minutes. Extra keys in slots 2 and 3 are used automatically.
A 'maintenance' notice appears	We're doing maintenance. Come back after the time shown — your existing results stay in the Library.
The connection dropped mid-run	The work carries on. Check the Library in a few minutes.
I don't like the result	Write exactly what to change in 'Ask for anything, in your own words' and press **Run again with the same inputs**. E.g. 'shorter', 'more formal', 'price first'.
My shop name comes out wrong	Check the brand name under Brand and save. You can also drop info for one run with the chips above the form.

Still stuck?

Leave a message under **Help → Customer service** in the right-hand menu. A screenshot of the tool and the message you saw helps us answer much faster.

For getting a key, see the 'AI Haeba API key setup guide', also under Help → API key manual.
