AI Haeba API Key Setup Guide

Step by step with screenshots · Genie EduTech Co., Ltd. · October 2026

Haeba's tools run on **your own Google API key**. Follow the three parts below and you'll have your first result in about 5 minutes.

Part 1	Part 2	Part 3
Get a key from Google AI Studio	Connect the key to Haeba	Run a tool and get your result

	Free key	Key with billing on (paid)
Where to get it	aistudio.google.com · it's the same key either way	
Tools you can use	Writing, document and research tools	Writing tools + images, ad photos, model shots
What to change in Haeba	Nothing. When billing is on, Haeba detects the key's status and picks the right AI model automatically.	

Part 1 Get a key from Google AI Studio

Free with any Google account. Screens are as of October 2026; Google may change them.

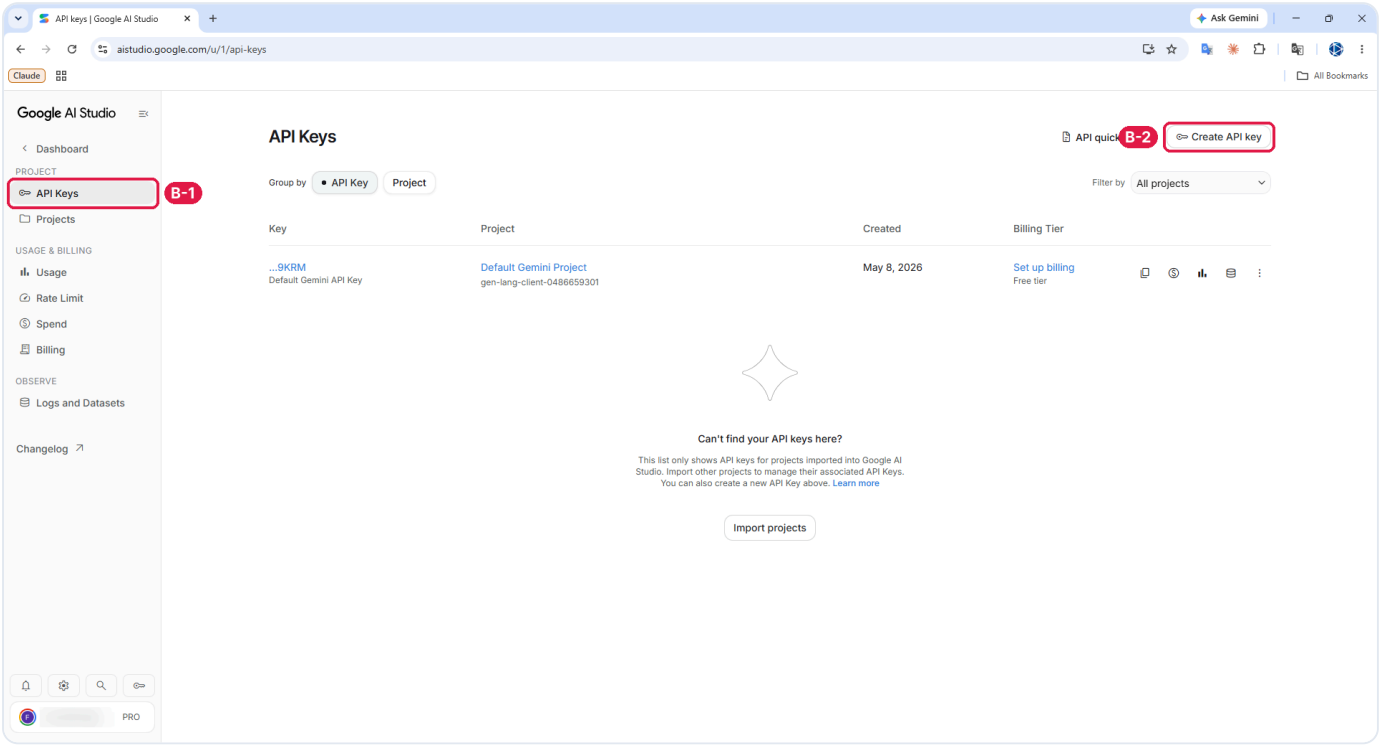

A Search "google ai studio" and click the first result

You can also type `aistudio.google.com` into the address bar. Sign in with your Google account, and accept the terms if it's your first visit.

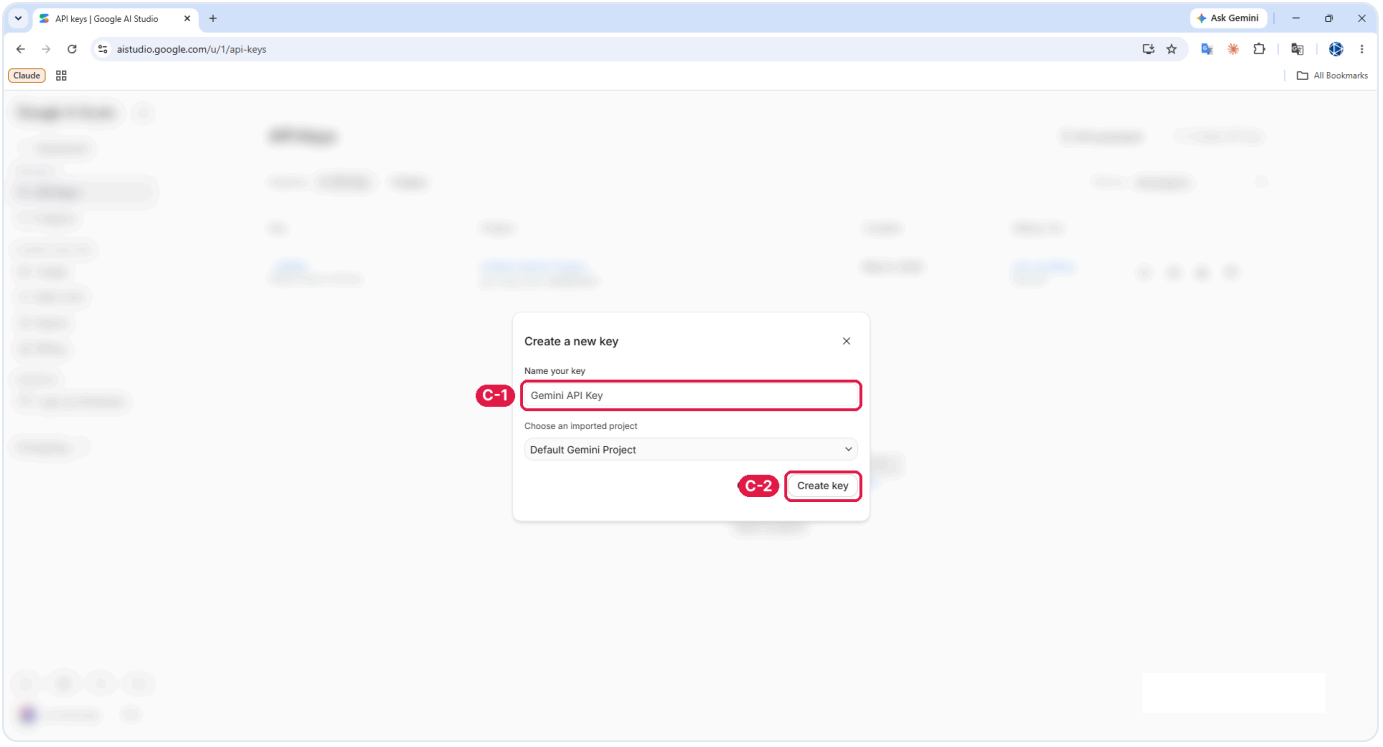

B Click "API Keys" on the left, then "Create API key" at the top right

Keys you've already made are listed here. You can use an existing key or make a new one just for Haeba.

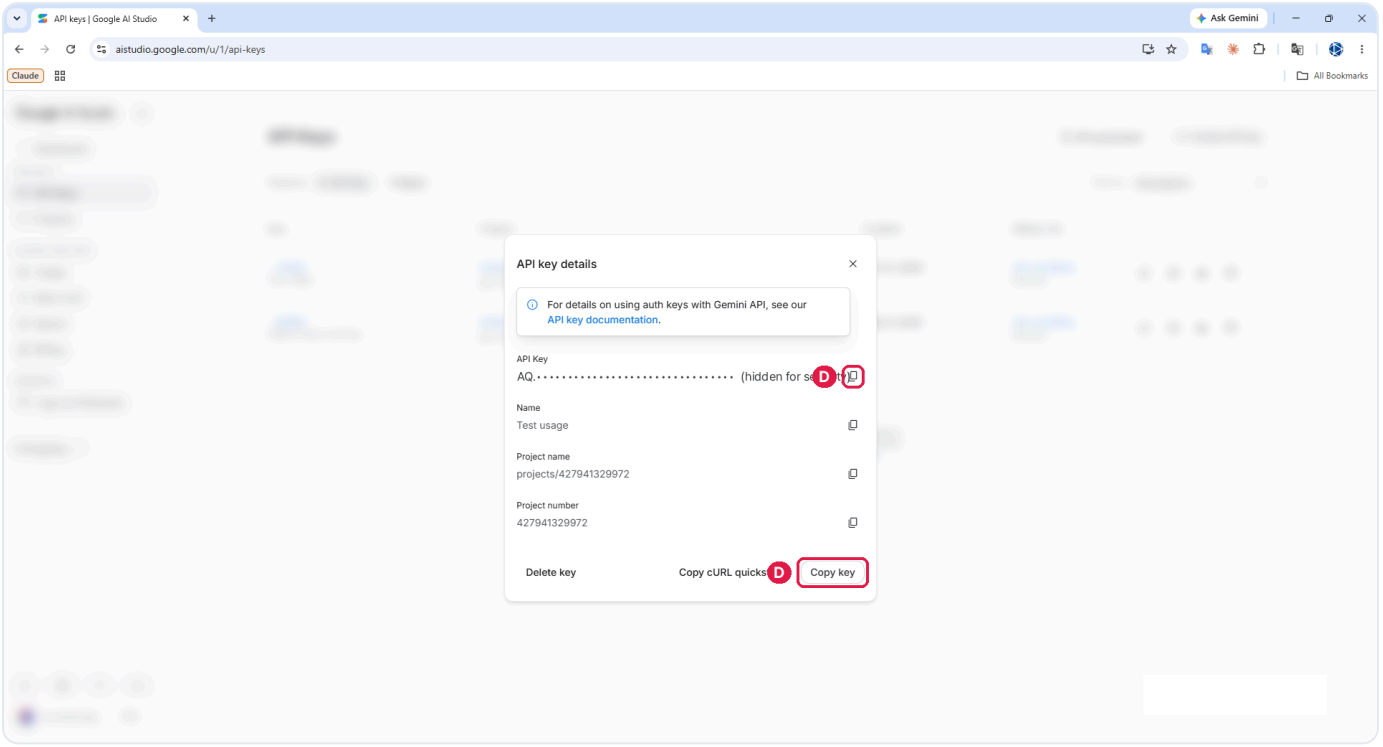

C Name the key and click "Create key"

Pick a name you'll recognize (for example, `Haeba`). Leave the project as "Default Gemini Project".

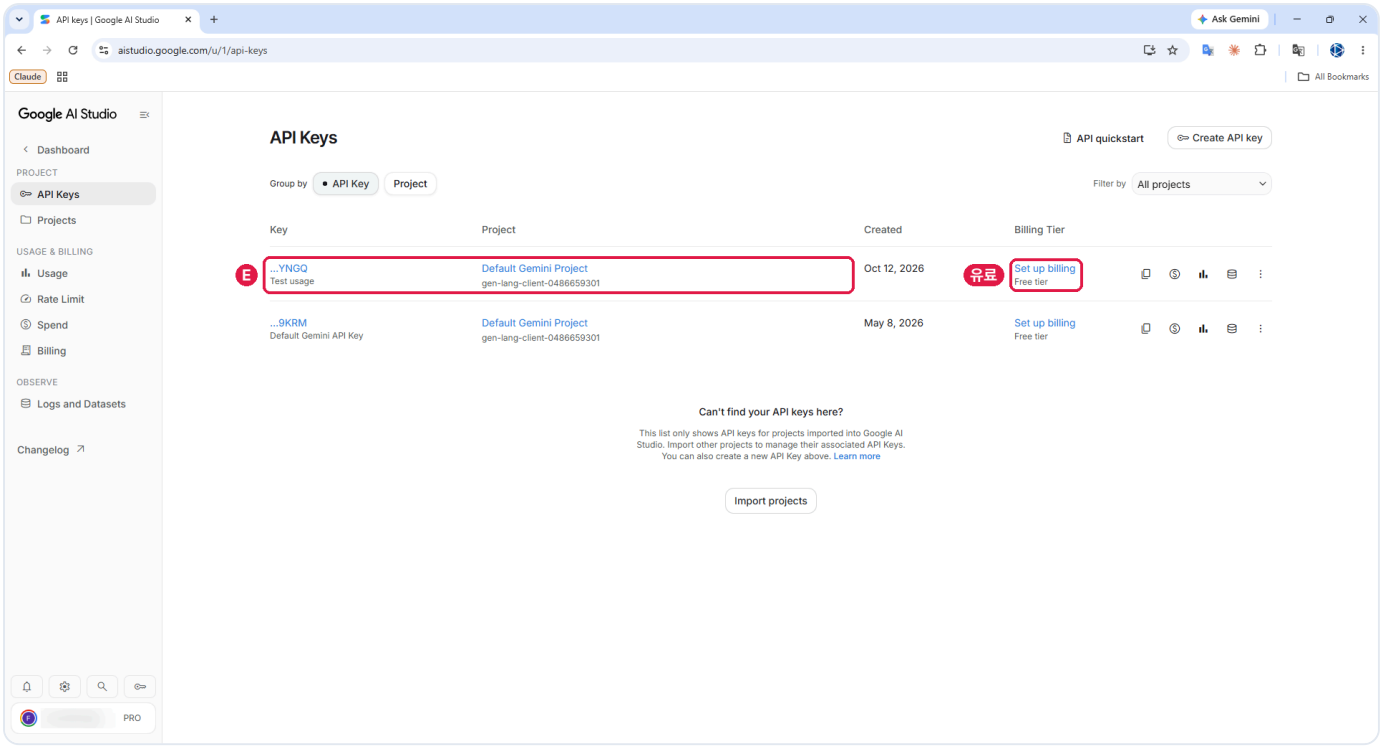

D Click "Copy key"

Keys start with `AQ.` or `AIza`. You'll paste this key into Haeba in Part 2.

E The new key appears in the list: you're done

If "Billing Tier" says **Free tier**, it's a free key. Writing tools work right away. To use image tools too, follow "Switch to paid" below.

Security · Treat the key like a password. If anyone else has seen it, delete it in AI Studio and create a new one. Haeba stores your key encrypted and uses it only to run your own tools.

Switch to paid (for image tools · optional)

Click "Set up billing" next to your key on screen E. Three windows follow (F → G → H). Nothing changes on the Haeba side. These windows may appear in your account's language; the Korean labels are shown in brackets.

F Choose a billing account → Continue [계속]

Pick your existing billing account, or click "Add new billing account" [새 결제 계정 추가]. All costs for this project are charged to the account you choose.

G Choose a payment type → Continue [계속]

Type	How it works	Best for
Prepaid [선불]	Buy credit first and spend from it	Staying within a set budget
Postpaid [후불]	Billed later for what you use; never interrupted	Heavy, steady use

This choice applies to Gemini API usage on every project linked to the same billing account.

H (Prepaid) Choose payment method and amount → Continue [계속]

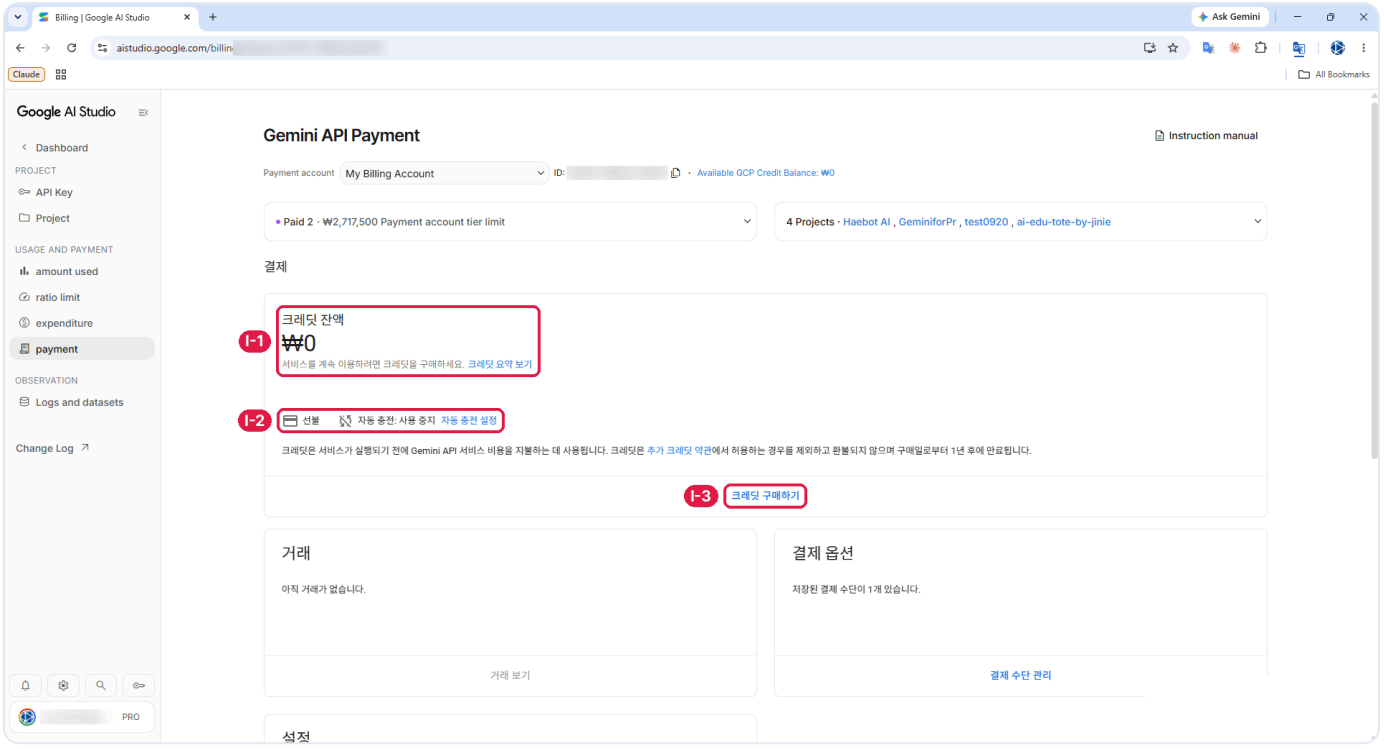

Pick ₩8,000, ₩32,000, ₩160,000, or "Other amount" [기타 금액]. Turn on "Auto top-up" [자동 충전] to refill automatically when the balance runs low.

> From Google's screen: credit can be used **only for the Gemini API**, is **not refundable** except where the terms allow, and **expires 1 year** after purchase. Start with a small amount.

I Check your status on the payment page

Once set up, you can check it any time under "payment" in the left menu.

Label	Meaning
I-1 Credit balance [크레딧 잔액]	Prepaid credit left. **At ₩0, paid features stop.**
I-2 Prepaid · Auto top-up [선불 · 자동 충전]	Your payment type and whether auto top-up is on. Change it under "Auto top-up settings" [자동 충전 설정].
I-3 Buy credit [크레딧 구매하기]	Top up here when you run low (same window as H).

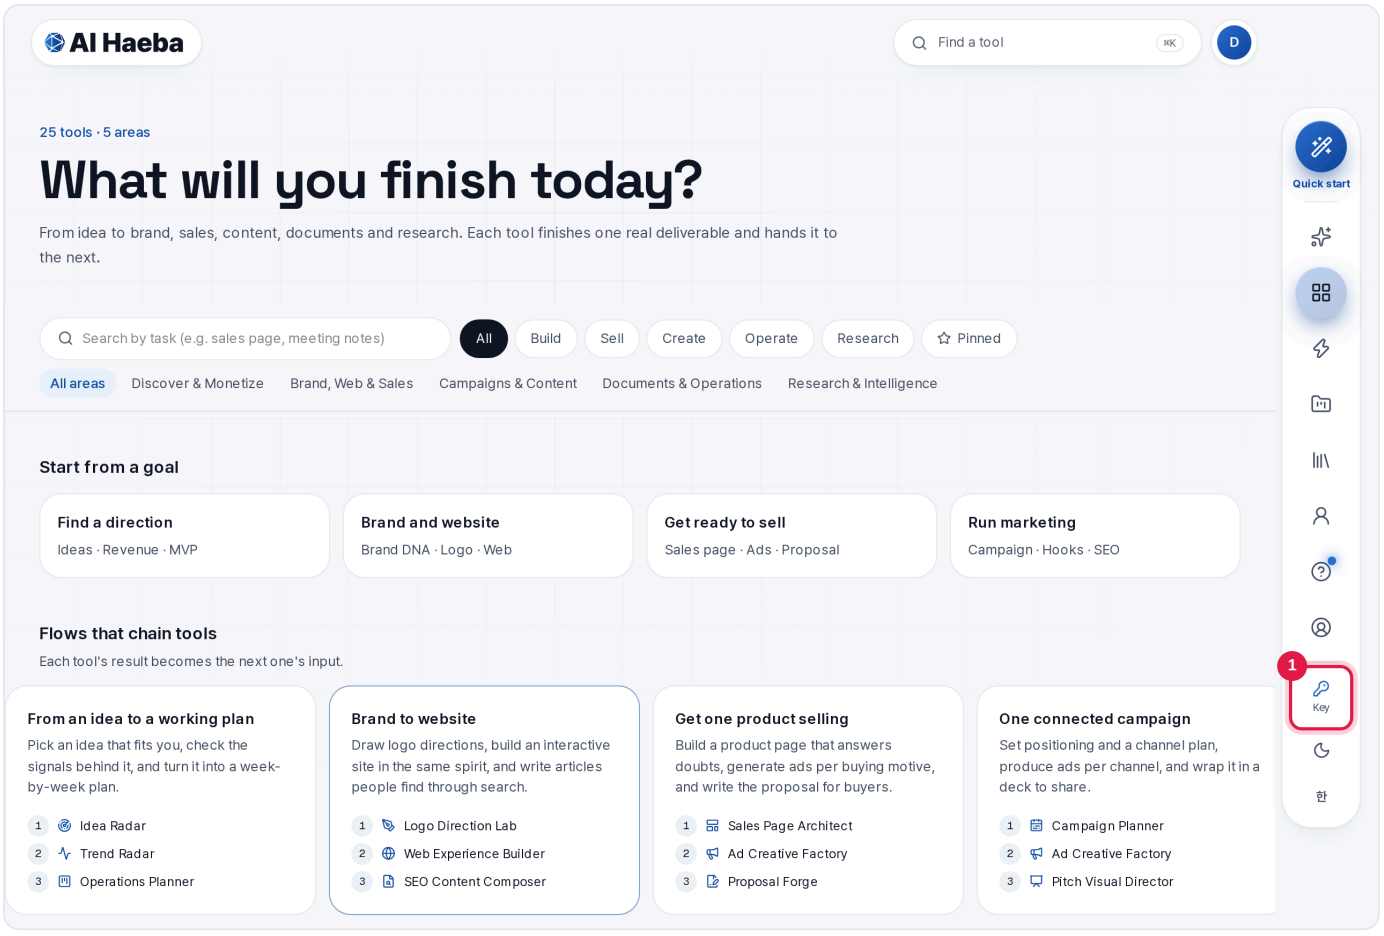

Part 2 Connect the key to Haeba

Sign in to Haeba first. To switch Haeba to English, click **EN** at the bottom of the right-hand menu.

1 Click "Key" in the right-hand menu

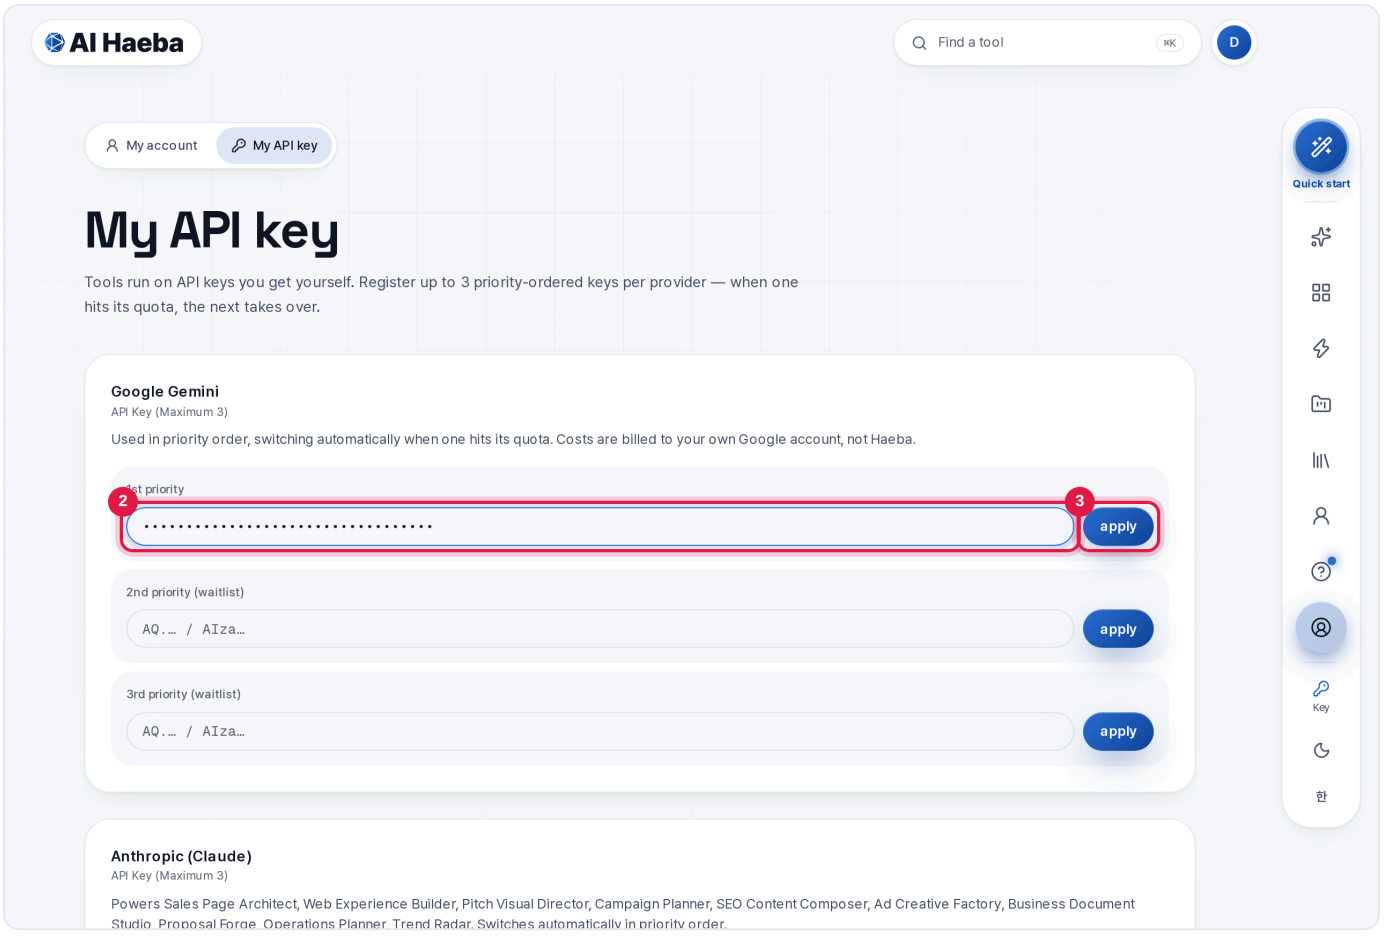

It's near the bottom of the vertical menu on every page. My account → "My API key" opens the same page.

2 Paste your key into the Google Gemini "1st priority" box

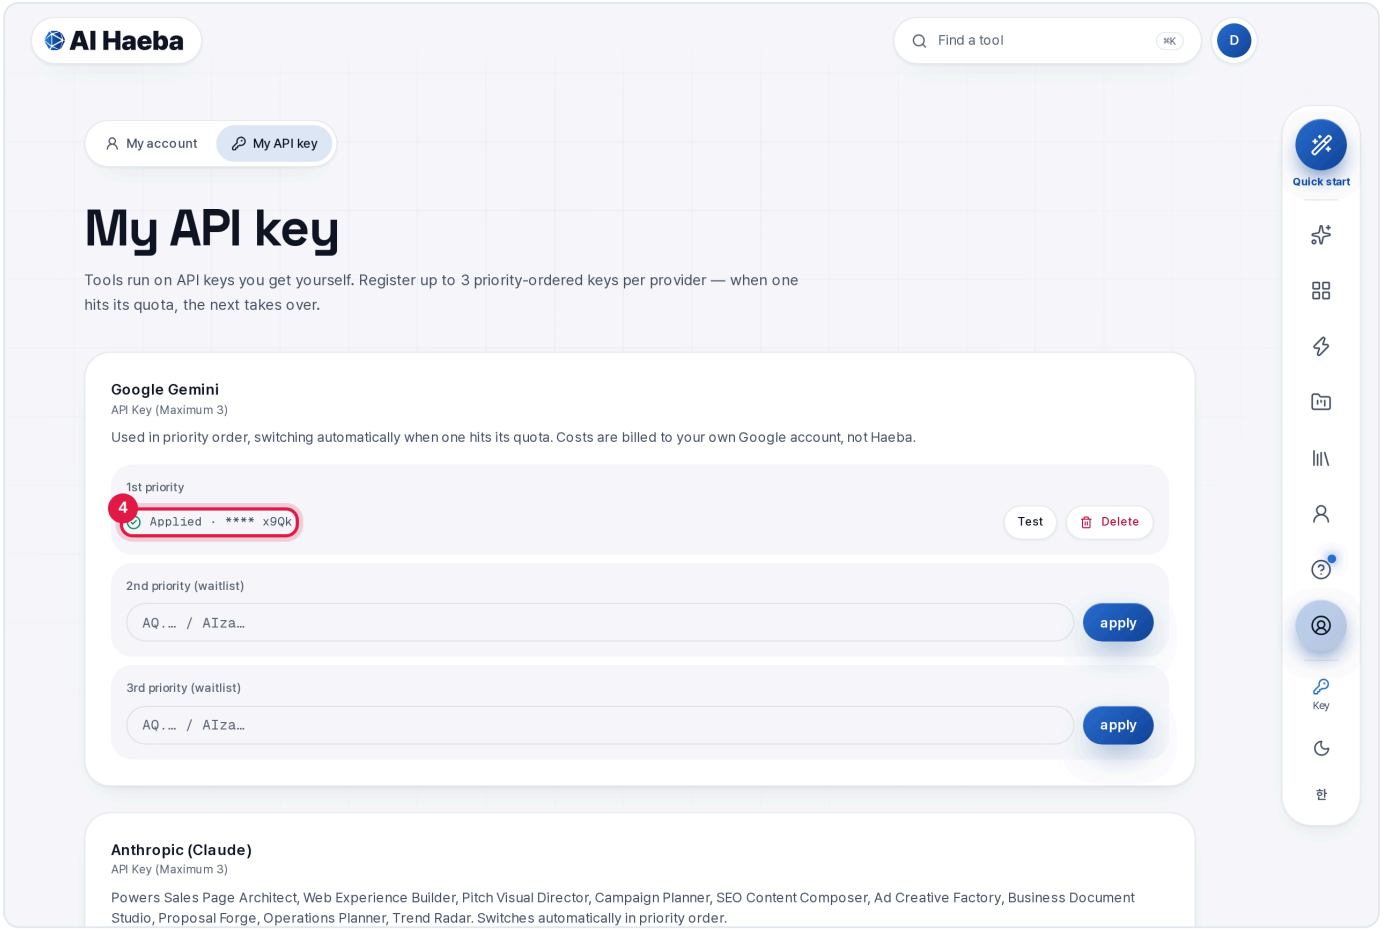

3 Click "apply"

Haeba checks the key with Google right away; the button shows "Checking..." until it's done. If you have more than one key, add them as 2nd and 3rd priority. When the 1st key hits its limit, Haeba switches to the next one automatically.

4 "Applied · **** last 4 characters" means you're connected

Use "Test" to re-check the key at any time, or "Delete" to remove it. The full key is never shown again.

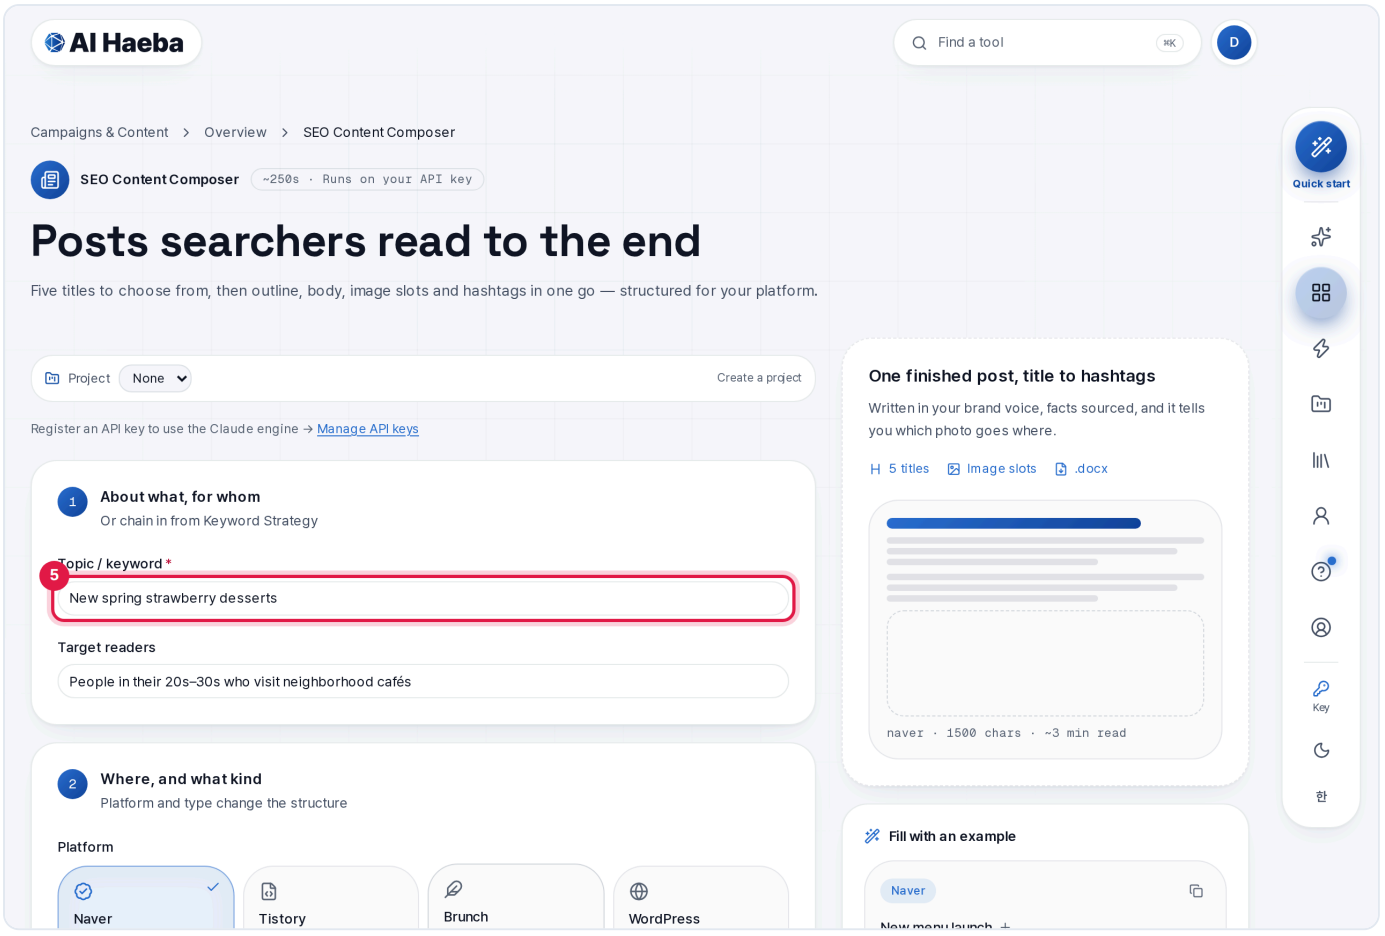

Part 3 Run a tool and get your result

Example: writing a blog post with "SEO Content Composer". Every tool works the same way.

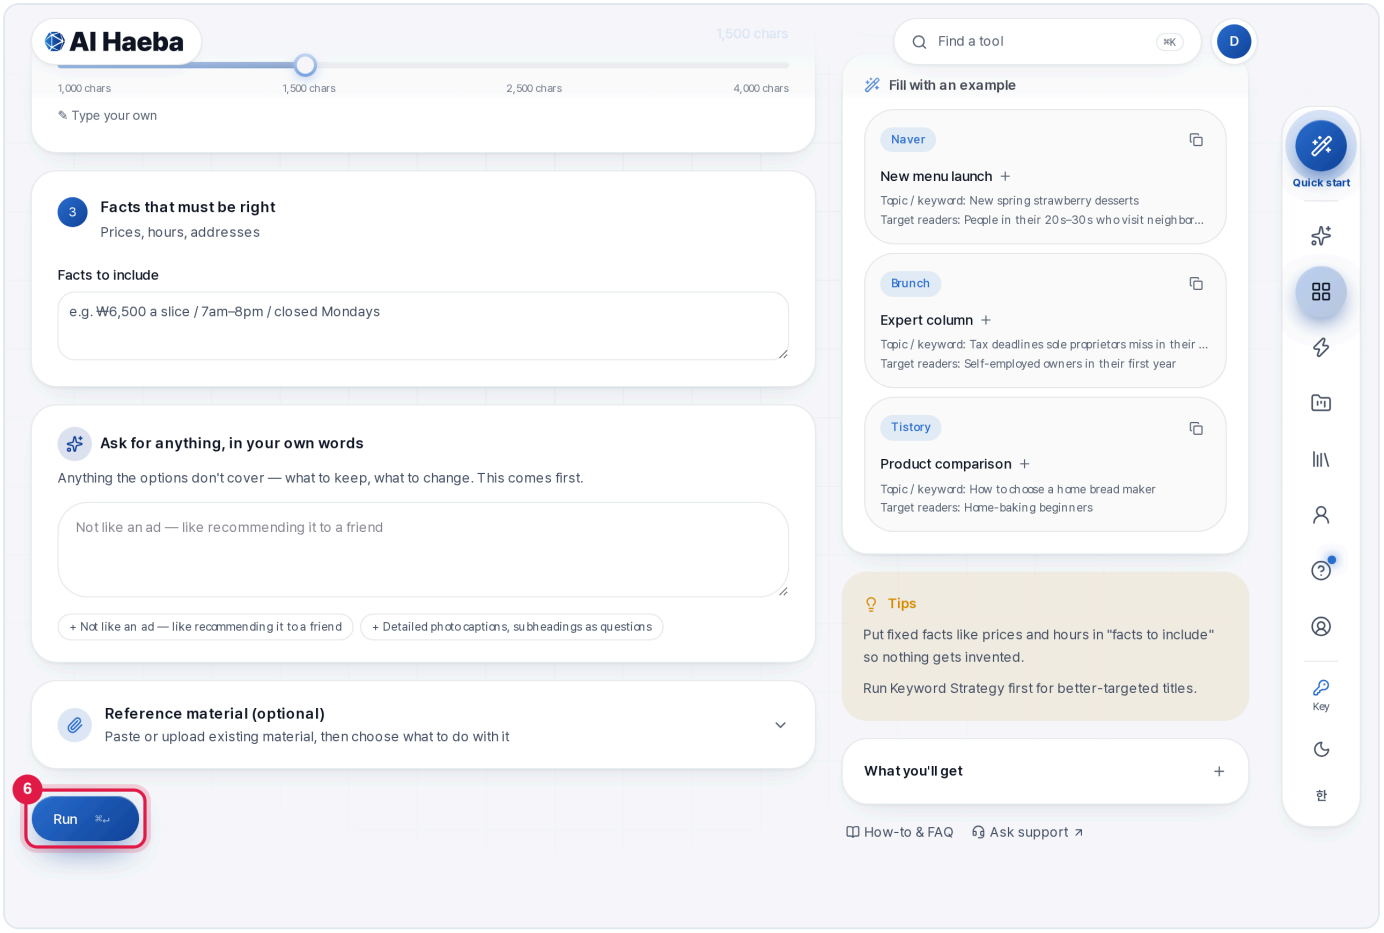

5 Open a tool and fill in the fields

Once your key is connected, "Runs on your API key" appears next to the tool name. The form starts with an example filled in; replace it with your own details, or click "Fill with an example" on the right.

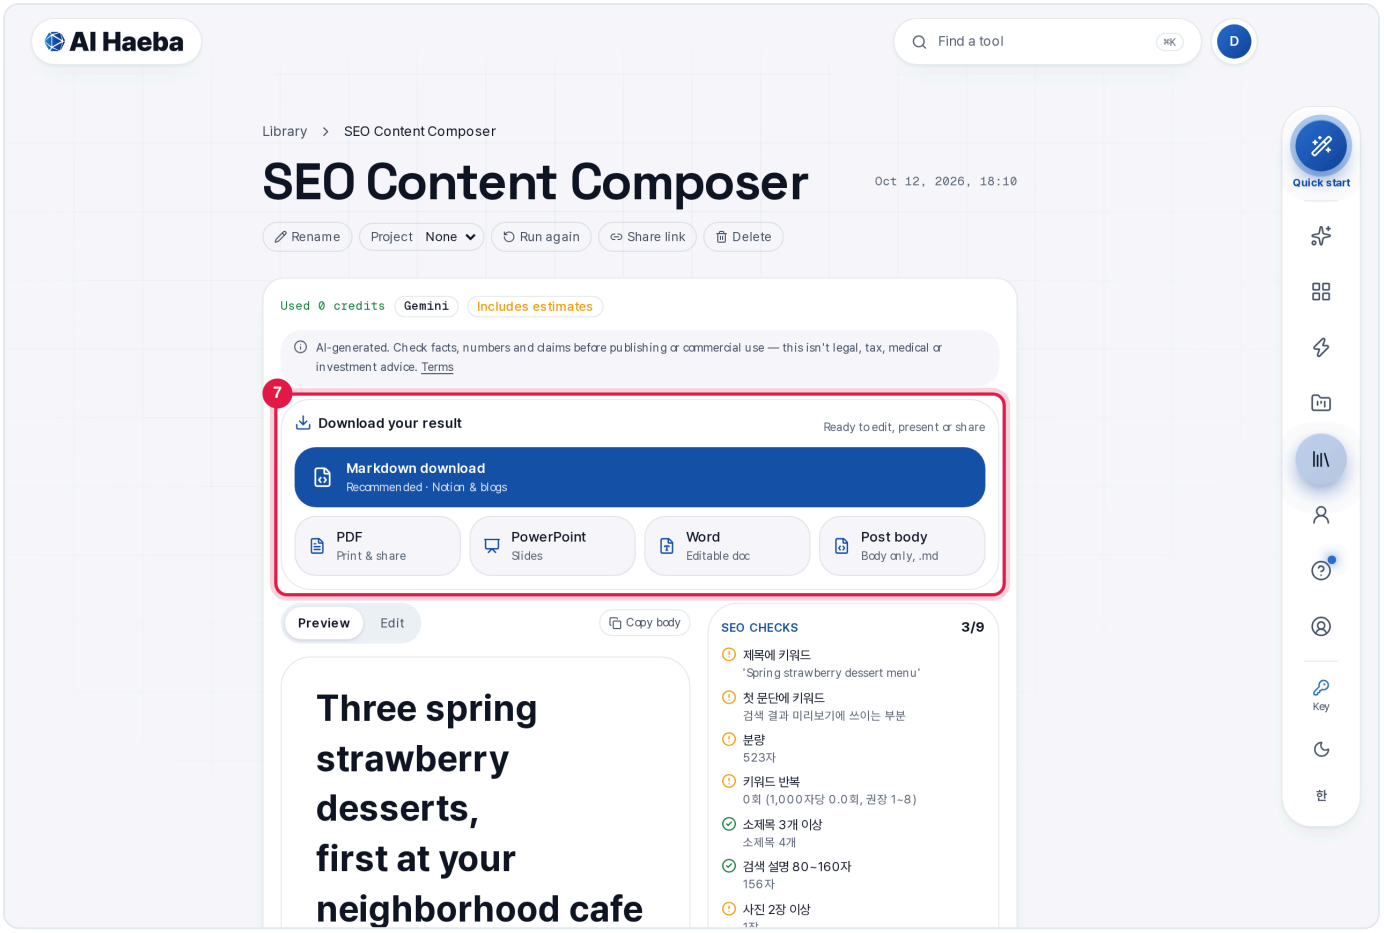

6 Click "Run" at the bottom

Or press `Ctrl` + `Enter` (`⌘` + `Enter` on Mac). You'll see each stage live, and the work continues even if you close the window.

7 Review the result and download it

Results are saved to your Library automatically. Under "Download your result" you can get Markdown, PDF, PowerPoint or Word. "Run again" makes a new version from the same input.

If you get stuck

Message	What it means	What to do
"API key needed"	No key registered yet	Add one under "Key" in the right-hand menu (Part 2)
"The AI engine's usage limit was reached"	The free key's daily limit is used up	Try again after 9 a.m. (KST) the next day, or turn on billing
"A free Gemini key can't make images"	Image tools need a key with billing on	Turn on billing in AI Studio
"The AI engine is busy right now"	Google is briefly overloaded	Wait a few minutes, then "Run again"
"Your API key was refused" / "Auth failed"	The key was deleted, copied wrong, or billing stopped	Register a new key; check your Google billing status

For anything else, use "Help" in Haeba's right-hand menu.

Made by Genie EduTech Co., Ltd. · Haeba screens are from the October 2026 version, captured with a sample account and sample data.
